文字记录

说话人 1 00:00
What, what we can actually, how we can use this. And basically, this is the evolution because we don't have a lot of time. I'm cutting a little bit. So basically the data of today is that for each lenses that we have, the human society, technology, nature, you will, trying to understand what is the focus for your in your case. And then the idea is to come up with tensions. So for instance, like your, you, you know that your IP will be focus on technology, but then maybe you want to mix up technology with some fans. For instance, humans that humans related to like families, specific people instead. The difference between humans is that like humans, yeah, it's about people. And society is about black stakeholders. So who are involved in your project. So maybe what you can do in your interest presentation in today's workshop is to trying to understand where you focus your IP. So the sessions will work in this way. For each length, you will spend about 3 to 5 minutes coming up, answering these questions. Can you distribute? Okay, so, and like, come up with like answer these questions and then you will also have a training with a clear and to discuss about this. And so now they're connected with your research. Alright, so we will start with human. So the question here is, so first of all, what problem does this lens review? So problem for me on RFP, trying to understand like what you are doing, but also trying to fine your research is like you're not focusing specifically on your mind. Alright, premiers for now. Please write it down so that you will take this. Some are set on and they can be useful. There are, okay, the criminal and airport simply can be some elements that are easier to identify that are very obvious.

说话人 2 03:11

Now it's me like we're encouraging you to think about all four seconds and the leader of the penalty more.

说话人 1 03:26
But also next topics that prompts you didn't consider. If you don't mind, AI. What is the connection with nature?

说话人 1 04:32
So once again, we focus on like, what is the problem that you're trying to solve? Well, last minute.

说话人 1 05:23
And.

说话人 1 05:48
Okay, then do you need a little bit more time now? Ready for discuss?

说话人 1 06:05
Okay, so Vera, maybe you want to welcome.

说话人 2 06:09
Yeah, you can discuss together.

说话人 1 06:12
So introduce your project like in a sentence and then like feedback.

说话人 3 06:19
What is your name and what is your human land in your face?

说话人 1 06:24
Okay, so make sure of you, make sure of you, make sure of you, make sure of you, make sure you practice, okay?

说话人 4 07:01
走吧。去。哦，那你去。

说话人 2 07:08
你们那个问题是不是变成一个？我的主题是时尚环保。在这个过程中。然后这个对象。然后。

说话人 2 08:02

建议大家要进行一个。进行一个。

说话人 2 08:16
就系统。

说话人 4 08:24
一个笼统。

说话人 2 08:29
就。

说话人 4 08:56
Yes. My select the like free motivation, you have to lead the immediately feedback and that will show.

说话人 4 09:14
就是人们的行动是需要。

说话人 4 09:23
就像是，比如健身，你是能看到你的健身数据，像睡觉，就是你能感受到你，对，就你对，你能看到你睡了比如多久，然后状态，比如有分数他可以监测，像饮食的话他缺，对，因为他这个我不知道是要讨论的，是要解决的吗？他不是一个公司。然后现在问题是。

说话人 4 10:00
Like a young adult with a long term, school cannot tell whether they are a.

说话人 4 10:06
well enough today 就是那些有长期健康目标的人。

说话人 4 10:10
I also gonna finish this.

说话人 4 10:12
到确定自己今天是不是吃的是一样。对，就是需要一个及时的，对，就我们。就是那种惯性，我们会不知道好还是不知道坏的时候，就会依靠惯性就往前面走。就像那什么牛顿第二定律就是除非就外力破坏，要不然你就会一直保持这个状态进行运动。然后回到你那个的话。

说话人 4 11:02
我想想就是如果说我制定计划，就我现在在坚持一套，就是我认为的可能是好的一套习惯，但是我不知道这个习惯它是对的还是错的，就。然后，但是我还是继续保持，但是但我会感到迷茫。

说话人 2 11:25
对，我就没有任何的东西告诉我这个，我现在坚持的就是对的。

说话人 4 11:43
除非就是你能查的就是你的，像你这种就是。

说话人 4 11:50
Do you like to measure your vid?

说话人 3 11:53
Yeah, that's a, that's your method.

说话人 4 11:55
But yeah, that's alright.

说话人 5 12:01
And now let's move to the next.

说话人 2 12:03
So perspective society.

说话人 5 12:06
This is here we are organisations, institutions, collectors that are involved in your project. So here the problem that this lends today, which includes more collective behaviors, make this problem possible. And then we also think who holds power, right? So when we think about different institutions, there is like parallel hair balances and different roles. So who holds power over this issue and who is it unit from that decisions, right? So we can think a lot about, yeah, power balances in this one and setting for human to organizations. Okay, so do exactly as you did with the human and perspective and we have three minutes for you to write down and to answer the questions. Okay. Okay.

说话人 5 14:15
Yes, I think raw, I think at every kind of value chain of your product. So anybody who is involved at any client of your projects.

说话人 1 15:13
Okay. Last 30 seconds for discussion.

说话人 1 16:04

Alright, so 3 minutes for discussion.

说话人 2 16:10
Please explain to your classmates what is your perspective, their society perspective, right? Yeah, starting from now. Yeah, good. Okay, center.

说话人 4 16:48
因为你在社会层面上他的那个。就是，嗯，我想。

说话人 4 17:04
我觉得应该是一个，就是社会的话应该是responsibility。

说话人 4 17:16
我觉得是 we don' t govern determinewhich which one。

说话人 3 17:38
Okay, but like, like, what is the issue in your case, in the safe species, like sources, for example, what is done?

说话人 4 18:08
So, so like, so packet and if we want to solve this part, so what's the method you want like just to increase your salary so they become technology. You what you deal with should nothing.

说话人 3 18:30
very terrible weather doing nothing or。

说话人 4 18:32
就算是外卖员，可能如果说有个可以直接降温的那种。

说话人 3 18:39
And then we will make a way full of color.

说话人 4 18:57
Yeah, we maybe we just to like not focus on the good people. Okay, maybe just focus on like how to deal with the like terrible weather, like a hot temperature, maybe some like technology, some kind of solve this like a user, they wear some technology institution to counter with this high temperature. And not just, but I guess.

说话人 4 19:30
worker 就我们可以就不同的解决这个。

说话人 4 19:34
so here when you say what the feature probably what' s the keyword。

说话人 4 19:38
就直接看是否能解决。就是比如说可能就会有些科技就是制造了一些类似于像。

说话人 4 19:55
对，因为这个就是我觉得应该就是需求大，就是假如说。这 5 个人是能解决的，是。根本的这个问题。

说话人 4 20:09
Normally, you need the power to say about your problem, what kind of organization influencing your. Yeah, yeah. It can be also like Twitch.

说话人 3 20:30
many people like。

说话人 4 20:31
然后。

说话人 3 20:31
people as well， doesn' t need to be。

说话人 4 20:34
然后下面的话就是。

说话人 4 20:36
so what is the problem again。

说话人 4 20:38
比如说个人权益的话，就是因为这个原因导致的问题，导致下面几拨人在打架，就可能是政府层面的、公司层、企业层面的和个人层面的。

说话人 3 20:51
OK， i think here。

说话人 4 20:52
以及可能有医疗层面。但他应该也属于企业里面。

说话人 3 21:00
Now, somewhere, especially that like this and because Trump, they were promoting much more. But now because of.

说话人 4 21:24
企业能做的一种是。

说话人 3 21:28
就他本身的雇佣。

说话人 3 21:31
Like people right now, rules, power of a decision.

说话人 3 21:42
When you say government. Okay, okay, then you click government. Okay.

说话人 4 21:53
And who is this student concern to to like to compose it.

说话人 2 22:04
So the next one, nature this where we talk about that for human actors, so ecosystem, like ecological cycles.

说话人 5 22:16
So here a problem that stands for real, so which day systems for ecological services or in place problem. And also the key question for me to solve, how does the problem reality human textile or from non human perspective. So setting from that human and sign team. Now let's look at the non human part of your question. Okay, so let's spend another three minutes that I just perspective starting the. Always.

说话人 5 24:15
It's might be the most difficult one to complete, right?

说话人 1 24:19
It's something that it depends on your topic.

说话人 5 24:21
The absent of data. Yeah, it's either really there or it's not. Yeah, it's very participation project to 91.

说话人 2 24:46
Please.

说话人 1 24:47
Energy more. Okay, energy if it's like endless infrastructure.

说话人 5 24:57
Anyway, frozen nation, research, natural keywords.

说话人 2 25:04
Yes, if the Indian is enough, go for it.

说话人 5 25:16
Unless you have a specific organization in my and extracting or perfect, right? Okay. Okay, 30 seconds.

说话人 5 26:08
Okay, I see. And now start again, discuss with them here, which means major percent.

说话人 4 26:36
这道题有点难做，但我对我的还好，因为我的是那个ecosystem， human body itself。 ecosystem 就是我们身体里面的很多，比如说肠道里面的菌群，我们的消化系统，我们的血糖，我们的各种各样的细胞的活动其实都会，他们都会有，就是immediate。他们会，就是就你吃进去以后，他们就会进行繁衍反应，但是就是他这个是在细胞层面，他对我们个人，就是对他，对我们我们自身其实是感知是很微弱的，除非就是影响特别大，就除非是你吃碳水把 blood pressure 拉得很高，然后你就像影响特别大才能感知到。所以说他的 question 我觉得应该就是。就是如何 translate 如何，就是把 seller 就是细胞层面的那种。

说话人 4 28:02
其实现在就有一些，就是那个 blood sugar，那个就 Moni monitor，就那个血糖监测仪，他们都会在这里放一个那个设备，然后这只要你吃了，你会看到上面数据在变，这是其中的一个方法。但是我觉得就那普通人如果带这个的话就。很少有人会真的为了这个东西带走的，除非你是真的是像，他们会觉得这像一个病。OK，到你。

说话人 2 28:51
你这个就只是说在。

说话人 4 29:30
我想的是你这突然想起来你这个 whether 是什么？就是。

说话人 3 29:39
你主要研究的是高温吗？还是说比如说。

说话人 4 29:58
但我觉得这。

说话人 2 30:03
Somewhere.

说话人 4 30:12
在政府层面上，它会是两条不同方向的线，因为他走的措施应该不太一样。

说话人 4 30:54
所以是高温。

说话人 2 30:56
OK，no， you looking。

说话人 4 30:57
那么我想知道是现在的高温的话，他们各方面是如何就是进行运作的？就是一个现象。

说话人 2 31:08
就现在就是我们感受到是这整个系统，就是虽然说现在也不低，大概 40 度，但依然会有人在外面工作。

说话人 2 31:33
第一个是我想知道就是现在的人。

说话人 4 31:37
政策是定义多少度为高温？他们是否就政？他们是否有什么的企业有什么？

说话人 2 31:47
OK guys stand up。

说话人 1 31:55
alright， so the next plan it' s about techno- and technology right so here we' re talking about two。 Start from infrastructure system that are more related to humans and how humans like about communication and everything related to how human connect each other through technology. So the question here is what tool platform on infrastructure is making this program better or worse? And then key question that you can ask yourself, for instance, what technology

Assumption is embedded in the correct solution? So maybe you, this lens help you to think about other infrastructure or the broader infrastructure that, and you are considering and take that as a way to explore alternative solution that you can explore for your app. Alright, so 3 minutes again in delivery and then 5 minutes to discuss. Three minutes from now.

说话人 5 33:03
Yeah, maybe about technology scheme or broad just so much.

说话人 1 35:10
Last minute.

说话人 5 35:54
Okay, guys, Time's up again. Discuss with your PM, which you wrote.

说话人 1 36:06
I guess, you know, I hope so.

说话人 5 36:09
Yes, it should be the person students that was easier for them to write the nature than the human.

说话人 1 36:18
Should we make it start? Okay, thank you.

说话人 2 36:23
Discussion like exist, I think.

说话人 3 37:06
Okay. But what is the technology that you are and I mean, well, any meaning about technology? What do you think?

说话人 3 37:29
What is like the technology that sometimes not the problem, system deviation due to climate change? right so people are moving like from where they is used to live to other countries right so like what kind of technology is using this so they like there are questions and websites that help people to find。 To shop. So recently about like the problem that this like how they organize where they are going, do they know? So there is like a website that I can to understand where they can, how they design like the environment GMV. Okay. So, but then like technology or platform better than to understand it. It's like a migration and technology. Yeah, so this and somewhere they go abroad. So what is the problem then? Why I probably.

说话人 4 39:37
有那种现在没有，但未来会出现的工种。但我觉得应该会减少。

说话人 3 39:54
这个会真的。

说话人 4 40:15
OK。

说话人 1 40:18
我也喜欢。

说话人 4 40:22
你的修路这个还挺。

说话人 3 40:25
not just about like how to do it， but like why they do it why are they do it。

说话人 4 40:31
OK。

说话人 3 40:37
所以。

说话人 4 40:40
我觉得你需要一个。你。

说话人 3 40:42
就是你的。

说话人 4 40:47
所有可能的那个研究的目标。

说话人 3 40:54
You see anything? impact to anyone， but it can be system now， but in the future you should think about future right in the future this can be for example a system that is more right， so you should think about this。

说话人 3 41:18

然后我说问题是 think about it。

说话人 1 41:36
Okay, guys, knowledge.

说话人 5 41:43
So I think once we have these three questions, then once you first think about attention or something that basically at the beginning, so the most surprising tension that you found, so now that you have all four elements, like which two lenses pull in opposite directions in your topic, so which of those you can, he can re identify? So like technology suggests efficiency, maybe such as wellness and suggest collective action and human express, right? So which of these you can identify? So yes, you can spend three minutes on this one. Then we do what attention reveals about the problem. So what does this conflict tell me about what is actually a state? And then we go to the next part, maybe.

说话人 1 42:35
Then the next part, maybe for later, just focus on these two questions.

说话人 5 42:40
For now, focus on these two questions. Sorry, do another 5,6 minutes. Two. Yeah, some of you already had a chance to think, right? I thought. Cuz it's no. Alright.

说话人 5 44:03
Okay.

说话人 5 45:17
Okay.

说话人 5 46:12
Cool. That's all.

说话人 5 47:55
Let me discussion. Okay, but where are we done? Can we move to a last bed?

说话人 1 48:04
All right. Yes, let's move in.

说话人 3 48:07
Let's move to the last week.

说话人 1 48:09
And personally for Circuit, it's really hard. All right, so now this project is about different design approaches, right? So the idea of defining what kind of design approaches is good for you is because if you can define the, like what kind of approach you can use, then perhaps you can use like the methodologies that are using that specific approach in your project. So of course, when you define a project, you should always add some somehow specific perspective, right? So you when you will write your final IRT, you can and start saying whi, which like what is what is your perspective. that you' re using to analyze the。 Problem, right?

说话人 1 49:06
So here, as you can see, I did Mark this exercise to try to understand how we can differentiate different design approaches. So as you can see, this is no complete, like I'm sure there are more design approaches, but the idea is like you can have like you can actually define what is the focus on of that specific design approach. So for instance, if you think about society, you can add an indigenous design, reverse of design, essential society, innovation center design. And this is really interesting because if you outcome as a manage center design is quite different to instead focus on user center design where you focus on the specific people and specific users. Here they opposite much shorter.

说话人 1 50:07
So what I want to do now, from now, I said, I don't have this. I didn't bring this. Anyway, what I want to do now is that you maybe you can take a picture of this. You could make a sentence. You think about a little bit about what kind of methodology you may use. And then you will take a sentence writing what kind of a perspective. Here I just put two perspectives, but you can use three or four or just one. So it's, it's like depends on your project, right? And then when, what are your perspectives and then what kind of approach would you use? Because you are taking those perspectives and then what are your lenses and the specific problem? Consequentially, what is your methodology, what you are prioritizing in your projects, anything that you want power.

说话人 5 51:12
Yeah, so even you can use this slot for, yeah, writing that correct.

说话人 1 51:20
Everything is here. So this is an exercise to push you like to explore also other kind of elections for your project, right? So you have five minutes, three minutes, five minutes. And then five minutes, the final five minutes discussion starting from now. Yes, 21st century. So 20% raise assigning, take like a little bit more strategic perspective. Like I actually begin with all the times that futures the time approaches, but then I move them because of course that makes sense in and our and product because we already are focusing on that. Okay. Yeah, okay. The industry, I

mean, I'm sure you don't know all of these, but this is just like starting point for you maybe to explore more different design approaches and to open up to new direction.

说话人 1 52:48
Super my phone tickets. Yes, I can share it with you. But the only thing is that, yeah, I'm planning to write a paper is the drum. Oh, so dynamics that you don't share with a trend.

说话人 1 53:15
Now, right?

说话人 1 53:24
Everything is clear.

说话人 3 53:25
Yeah, I think.

说话人 1 56:01
Do you have questions? Everything's clear, 13%.

说话人 5 56:40
So, alright guys, so let me keep fit.

说话人 1 57:02
Maybe we can, what we can do is to be love. One of the sentence that you wrote, who feels that like their sentence is quite conferences or not?

说话人 5 57:21
Who has like 50%?

说话人 1 57:24
Yeah, who has finished a sentence? Anyone? Jerry? Yeah, and you can share something. You are not writing. No. Why my seller like looking at this eye. Yeah, so I want someone. Yeah, you finish. Okay.

说话人 6 58:00
My research is the intersection nature society to technology and developing a clients. I'm looking at the implementation gap, you know, material feasibility and public adoption of microbiome integrated design in our sessions. And my methodologies, prioritizing lift experience, and it's my exception by generally political evidence translator into future scenarios.

说话人 1 58:41
Okay, so why your blanket? I don't know. I think that's five people by unifying the and they approach it, right? Yeah, by default.

说话人 6 58:53
I think if it's me, 21st century design, okay, 6 society.

说话人 1 59:07
No, I think your like to be honest, your research resources are not connected to buyer design as well. Yeah, exactly right. So sure, nature is part of your. And I think also like you're connecting your research as well with humans, right? What are their relationship between nature?

说话人 6 59:30
I think, yeah, I'm struggling cuz it depends on how this is sale, whether student or society. This is kind of like a society from. So if you're looking at making a change, which is like a bigger pen mindset , maybe society.

说话人 1 59:51
I mean, here there are two approaches, but like, I'm sure there are more. You know, they like maybe like if you feel that this is like you're suggesting that in the section in a society, human and nature, maybe you can try to understand what are they and different design approaches that can like focus on what you're working. Now, the fact like for me, society new research is normally getting because like it's more interesting what is that exist in it's more interesting what is the connection between criteria and you.

说话人 6 01:00:36
So how this connection can be kind of like instant cues. For example, something we're looking at like the actual lives problem. So that inside changes truly, let's finish it over the society talking about have cultural manufacture, it would be individual team and we, but then again, you need to also to prioritize.

说话人 1 01:01:08
Yeah, like as I was saying to Vera, I mean, you cannot work on education. I mean, you can still like a little bit of your app, it can be society, but then you prioritize the human or you prioritize the nature and society also kind of, well, but like. Like you sooner later, you need to take a step. Otherwise, like it's in, it's really then otherwise it's a systemic design of approach where you're trying to understand everything, but still, even here you need to remind your families. So there is always this need of the time driving as well.

说话人 6 01:01:53

At the point where I'm trying to decide whether my, like my audience says slash stakeholders is like, I mean, communicating idea to general and I can communicate idea to our policy decision matrix by building regulation. So it's building regulations probably using personality, but that is like.
