文字记录

说话人 1 00:00
Getting ready to start the dialogue around sensitive, mindful research with your peers and have kind of been talking about the clients to continue this process later on with merchants. So it's been a very quick session.

说话人 2 00:14
Yeah, exactly. And like you do in this description, this is a lot for us to be fitting in an hour. But the way that I may, and I like to think about what we're about to do is the beginning of a much larger conversation, not only with your tutor, with your peers, with the communities that you're working opinion, but also with yourself. So an element of what today's session is going to be is a lot about introspection and trying to understand who we are as a person in our lived experiences and how that impacts the way that we gather information, understand data and make change as designers in the communities that we're working with.

说话人 2 00:53
So one of the things we're gonna start with today is the concept of positionality. Is anyone here familiar with positionality when it comes to conducting qualitative research? This will be a very fun session then. So we're gonna get started with positionality. Positionality is often sometimes called or often refer to also as reflexivity when we're talking about qualitative research methods. But today we're just gonna refer to it as positionality. The definition of it is referring to our social and personal position in the world. Where we stand today, given the complex constellation of not only identity factors that might be more specific like our gender identity, our race, our nationality, the language that we speak, the language that we first Learned in our first language,

and maybe your disability or ability status. But beyond these maybe more defined factors, we're also thinking about how our lived experiences in our life, the values and beliefs that we hold as complex individuals and our educational background, our career, what has led us to be the researcher we are today? And how does that actually impact the way that we conduct research and understand what we learn? So this combination of complex factors, right? Maybe CRISPR, identity markers when we're talking about gender or sexual orientation, you know, race, religious background. But we're also thinking about how does that combine with our lived experience to shape the perspective we hold as researchers, informing what we might notice in our research, what we might prioritize, either inadvertently or purposefully. And the big one here is what we might actually accidentally be overlooking because of where we sit and stand today as people, right?

说话人 2 03:03
When we talk about research, we talk a lot about context, right? The context of the problem that you're solving. Today, we're gonna be talking about the context in which we have lived our lives in and how do we bring that into looking at a research plan problems and our research plan with nuance and care and understanding. You'll see here on a, on the right, a very colorful and lovely visualization that will probably be quite hard for y'all to see in the back, but we will provide the slides for you. That is a good visualization of how we can understand who holds power and what elements of identity hold power in the societies that we live in and what elements of identity are more marginalized. So we'll talk about that a little bit in our activity.

说话人 2 03:49
So why is this important in research, right? We're talking, today's session is all about methods and methodologies when it comes to our positionality or who we're in our life experiences, in our identity. This impacts what we choose to research, right? So this is impacting before we even sit down with our tutor and present our proposal for the research that we're trying to conduct, how we interpret the data we gather. So not only the plan we're making to gather that data, but how we evaluate the data ourselves is actually going to be impacted by our own personal positionality, our own lift experiences, the way that we walk through the world and also how others respond to your work.

说话人 2 04:33
So yesterday we're gonna be talking a lot about this internally from how do we understand ourselves, but also how do we communicate what we've Learned to the world and how do people interpret that?

说话人 2 04:46
As you all know, research, especially qualitative research, is not a neutral practice. It holds a lot of nuance. It holds room for interpretation. We are interpreting and synthesizing information

gathered from complex people. Oh, and we as complex people ourselves have to find a way to, you know, be able to analyze and make sense of what we're learning given our own lift experiences.

说话人 2 05:11
So today we're gonna be talking about recognizing the nuance and complexity of conducting research and how that's a strength, right? Today is not a session where we're saying this is also complex. We're complex, other people are complex. Therefore, it's not worth doing what we are saying is that the ability to hold many truths at the same time about ourselves in the world around us is a strength when it comes to conducting qualitative research.

说话人 2 05:38
I like this quote here, around researchers reach. Researchers position influences not only what we choose to investigate, but how the research is conducted and the results that are found. We'll provide this visual on the slide, especially for those who can't see in the back. But this is a nice way to visualize how elements of our identity can impact the type of methods that we choose and then also have impact on the way our research is influence from a quality and impact perspective. So you can take a picture of this. We'll provide the slide. This is a common visual when you're thinking about how do we as an individual and our own those experiences, how is that affecting the journey and research? This is a good visual for that, and we'll provide that in the slides later.

说话人 2 06:30
So before moving to our activity, this is a quote I like to return to when I am conducting the sort of positionality reflexivity portions of my research that I do, which is no matter what research methods we use, the stories we tell about the world are always partial. It's essential to reflect on our positionality and how it shapes research process and findings. We know no matter what we do as researchers, we will have partial truths about the world, cuz there's no way to have a holistic understanding of every complex bit of data about the project we're going to solve. But it's finding comfort and finding skills to empower yourself to be able to sit in that partiality, to sit in that imperfectness and do so with nuancing care, right?

说话人 2 07:23
So we're gonna do our first activity. We have two sessions or activities during our sessions today, one led by myself and the other I do have. That is actually okay.

说话人 3 07:32
Should we just distribute?

说话人 2 07:34

Yeah, hopefully we have enough. So this is going to be a very quick activity. So most of you should be working on and IRP, our independent research projects, but not all of you. So as you're passing this out, we're gonna be using the donut side first. So shape with the dough. Let us know if we don't have it.

说话人 2 08:08
Okay? And now I'll explain our activity really quickly. This is gonna be short and quick, but once again, this is the beginning of a larger discussion. So we're gonna be on the donut side first. So what we're gonna be doing today is a really rapid version of what we call positionality now, right? So it's beginning to consider certain elements, certain factors of our identity and how they might relate to the problem that we're trying to solve, the research that we're trying to conduct, the communities we're trying to work. Yes. So I'll walk through this with an example in a second.

说话人 2 08:45
But generally, the three sections we're gonna be looking at today is just putting a few words about what your research should conducting is. So if you're doing your IRP, just the IRP topic. If you're working on a different project, you can do that.

说话人 2 09:00
On the left here, we have a non comprehensive list of different elements that may impact our identity or maybe part of our identity. Say non comprehensive here is because there's no one list that contains the multitudes of all of us, right? But this is just a starting point. And then this is where we're gonna be doing our mapping. So for an example of this, I've filled this out for a past project that I've done. So I have my research topic written up here. So this project was looking at the relationship between death brief and coastal ecosystem in a small Cornish community. So small coastal community. I went down this list and was thinking about do any, would any of these different factors of my identity impact the way my research should be conducted with the impact the way I'm synthesizing the data that I'm finding. And I'll guess in some ways all of these do.

说话人 2 10:05
But then I went through the process of thinking, okay, some of these are standing out a little bit more than others. Let's consider that I'm working in a small coastal community in the Ek. How does my nationality impact the way that I'm working in this community? How I'm conducting participatory research, how I'm making contact with different participants, how I'm understanding the cultural context of the work I'm doing. So that's one example. This is maybe one of those more fixed identity factors.

说话人 2 10:39

Another factor I consider is the fact that this is a project around definitely grief. And very luckily at this time in my life, I had no experience with very sudden and profound death and loss. A lot of the people I'm gonna be working with or was working with have.

说话人 2 10:56
So that was an identity factor, something about my lived experience that I thought is important for me to reflect upon and understand before conducting this research. So I went through a couple of other examples, including my religion, cuz I was working with religious leaders, my socio economic status, the my general knowledge and experience around coastal ecosystems, which is quite small. So I mapped these around the outside and then in sort of a heat map, I showed visually how much each of these factors would sort of impact the way I might be conducting my research for this project. Not in any good or bad way, but just in a way of acknowledgement and reflection, understanding of how can I make informed, responsible to say things. And then lastly, in the center, it says drawn image that represents you or your project. And that's just a picture of my cat. I think she represents quite well. So with that same example, this is one way you can fill out the chart.

说话人 2 11:59
Another way, if you prefer visually to have like a closeness diagram, if this is your problem or your project in the center, you can have these factors be close if you feel like they have a lot of impact or far away if you feel like might be worth thinking about that. When I did this project, I was in my late 20s. Most of the people I was working with were much older, had a lot more experience with aging and death United. So I was like, worth knowing, might not impact that much, but worth considering.

说话人 2 12:34
Okay, so now you're gonna take a turn with this. I'll go back to this slide and we'll get started. So we'll work on this just for a few minutes. You can have as many of these identity factors on there as you want. But what's helpful is to think about them in context, right? You don't just write Nationality USA, you'd say Nationality USA. Important to consider cuz this is a really. Be big tourist industry for Americans, and the tourism industry has caused a lot of harm in the community.

说话人 2 13:08
Does anyone have any questions about, can you start with this? No? Okay, let's keep going. Have fun with a little picture in the center. If you want. Call us over if you have any questions while you're filling this out.

说话人 1 13:20
Yeah, I think we can have around 15 minutes.

说话人 2 13:25
So take your time. The curate should be great.

说话人 3 13:35
I want to use very strongly. Okay.

说话人 2 13:53
And don't let this list hold you back, but there are other things that you haven't considered. Like on this list, there wasn't that thing about having experienced death or loss. So use this as just a starting point to figure out what about your life and lift experience, who you're, the impact, the way that you conduct research.

说话人 1 14:25
Yes. Another thing that this is quite personal, I understand. So we're not gonna be presenting this to each other. So reflects personally as much as you want.

说话人 3 14:58
Alright.

说话人 3 15:07
Yeah, right.

说话人 3 15:36
Yeah, is completely environment for.

说话人 3 15:47
Okay, we can see someone sandwich present. Listen, it's fine.

说话人 1 16:27
Exercise.

说话人 3 16:34
Let me see for you. Oh, today we're all on earth.

说话人 3 17:00
But do you have come over me? So goes down.

说话人 3 17:22
The sun going down 3% incubation clear.

说话人 3 18:09
Danger.

说话人 3 18:23
Oh, any questions?

说话人 3 19:11
Yeah, that's perfect.

说话人 2 19:33
Sorry, 18 solution.

说话人 3 20:19
Make the hills.

说话人 3 20:49
Coming to.

说话人 3 21:15
Here is perfect.

说话人 4 21:44
I think we just had a very interesting conversation that I want to bring on. Cuz I think when I started with the exercise, I'll just look at this in relation to what positionality looks like for me as a researcher within the project. But I think a bit of introspection, many realize, but it's also a positionality looks like in terms of how the user would be. You, me as a researchers, I sort of divided the center two parts actually, is how do I sit within, how do I see how I sit within that design research process, and also how does the audience see me as an outsider sitting with them that research project. So that's, I think, very different aspects of how I look at this. So yeah, that was like, absolutely.

说话人 2 22:32
That was a good like three points gonna be about like how it's not always just like, I'm gonna be how are we viewing people we're working with, but maybe having some assumptions in some way, like how do we feel like the people were working with will interpret my presence in these spaces? Is it present it? And sometimes not? Maybe with your example, cuz the topic was really like broad or I guess less sensitive, but we are working on projects that are incredibly sensitive, right? They're incredibly maybe intense, vulnerable spaces. You can do these kind of exercises to figure out like, even am I the person that should be entering these spaces? How would my

presence it affect in some way the safety of this community I'm working in? Or how would my working on a specific topic, how could that have to keep on working with? And that's not to say that to do this is to limit your research, but what it is to do is empower yourself with a little bit more situated knowledge around how might you show up in these spaces, even if your project is something that is, you know, not incredibly sensitive. I think we both agree that like having more awareness of self and more knowledge of situations that you are walking into, we'll do nothing but better your outcomes, not only as like a researcher, designer, but I think also just interpersonal connections.

说话人 1 23:56
It's actually very interesting what you've said. Cuz as designers, we have to talk about empathy, like stepping into others shoes. It's interesting. Stepping each other. She is looking at yourself like how they see me. That's something that we often themselves.

说话人 2 24:11
I hope that very fun. I'm a fun but also introspective element of research. I think I almost think of it as like a quasi journaling about what you do, and it's something you can return back to when you're choosing your methods before you reach out to people, before you do something. It's not to say you have to do 20 of these, but to just kind of return to sort of self and who you're, as you're planning something or entering space, I think is a worthwhile actually. So yeah, so we gonna move to the second part of it.

说话人 1 24:47
So what are we gonna do with this information that we've just populated, right? I think a lot of us, by doing this, we realize how privileged we are right here in this leading art and design institution in one of the major cities in the world. And we're very privileged to be here. And it's very easy to study. Oh, I'm privileged. So I'm kind of working on that side. And then there is like all the other people on the other side. But how about instead of saying that I'm privileged, I kind of being sorry about it, being almost, you know, hopeless that I can change anything. How about you change that privilege into responsibility and see what you can do with. So basically the idea is we were thinking about this, how not to design for yourself.

说话人 1 25:37
Cuz you're, of course, you're looking at your RFP in all the other searches that you will be working on through this lens, through who you are having a race to upgrade and how to shift that project to responsibility. So thinking that this is you and this is your project. And I think as usual, it would take you one direction.

说话人 1 25:56

But for this session, we'd like you, would like to encourage you to think about the unknown. So the unknown could be any kind of crisis. You know, we had a, we all assurance a global pandemic, we'll see world collapsing rewards. We're also, you know, it's also an encouragement to think about working with people with different form of views. So this is also useful for you when you choose who to work with. I'd like to say about the CPC or what if you come up with research that increase people.

说话人 1 26:30
Session means this unknown is currently uncomfortable or something that you haven't experience. If you add that to your project, how is how are things gonna look like? And for this activity for today, we want you to think about vulnerable group.

说话人 1 26:50
So what if you add the vulnerable group into your project? And vulnerable groups, basically the definition of it, are those people who are lacking social, political, economic and cultural capital or physiological or physical capacity. So the definition is really very broad. And according to the UK Office for Health Improvements and disparities, their vulnerability guide, since the risk factors are related to individual relationship, community or society level. So individual could be like people's gender, different factors related to behavioral learning difficulties. Then the relationship in terms of relationship is the family income, family size, household energy, behaviors, the community level would be, yeah, kind of violence or unsecurity in the community, low social integration, lack of possibility for creation and things like that.

说话人 1 28:00
These are, of course, the much longer lists and factors related to society and employment rates in society, the discrimination, homelessness. And this list can be really long. So vulnerabilities are related not only with, you know, people did something wrong and that's very vulnerable. It's actually the whole environment community with the whole ecosystem where people actually, so it's often not really nobody's fault is really very systemic challenge.

说话人 1 28:33
And even though if you think that, oh, I'm choosing my own research and I'm choosing my own participants, I might not need this. I can avoid working with vulnerable communities, but all people who are not white men are merchandise, which means an absolute majority of us in this world. So you gonna need to carry about these aspects to some extent at any work that you're gonna be doing.

说话人 1 29:05
So for the activity number two, for the time that we have left, yeah, around 20 minutes. So we have two parts prepared for you, which are a representation of four different vulnerable groups

related to individual love, societal relationship and community. And it's just an invitation for you to work in group, in pairs. So you can also just stick one each like you did with the previous. Yeah, she's a paper. So these include identity factors, just like the ones you consider for yourself, but these are kind of prepared for you to describe each of these BTP. And the invitation is for you to imagine if this person is an actor in your IRP. So you're inviting this person into your research. And how would you approach conduct in primary research with these people? So now you're exactly in the, at this time of your project when you're thinking about primary research participants and things like that. So just imagine what these people are in your area. So how would you do? So basically, the idea is just you are discussing in cares and you can take some notes. So we would like you to think that based on these identity factors, what challenges can you identify? So for example, if person is socially isolated, it's difficult to reach that person. If the person is all the, how are you going to communicate with that person? How you going to encourage them to participate in your research and based on their beliefs? Is that going to be easy? What kind of medium do you need to use? What external support we need? Maybe some of these groups can only be reached through organizations or through other people.

说话人 1 31:09
Okay, which data collection methods do you choose that would accommodate research? So you can take some notes or you can just openly discuss. And one thing, try not to reinforce the feeling of marginalization. You're not going to people and thinking, okay, this is a good level.

说话人 1 31:30
Group. I need to be like really careful and I need to kind of decide that try think that, you know, these are just people. I see it as you would go on collecting. So yeah, we're probably around 20 minutes for now, 15,20 minutes.

说话人 2 31:47
Okay, so if you, yeah, I guess you just a person who is sitting next to you and then the questions on the back of the positionality now it's best just for you guys to look at later, maybe a little journaling exercise for your home. So you can ignore those questions on the.

说话人 1 32:02
You can start from No. 1 or any other number that you, any other group that is more interested.

说话人 3 32:18
Identity.

说话人 3 32:30
前面那个实时会议。这个是飞书，这个是o，因为这个很奇怪的一点就是它不能复制，很呆，它必须得，它不能，只能复制一行，就是它不能全部复制，所以说我今天把这个开了，这个就是飞书，这个

是飞书，这是飞书。然后这个 o 这是我今天刚下的，这叫啥？ Audience.

说话人 3 33:20
Someone, Australia.

说话人 3 33:38
Some of them to be the same.

说话人 3 33:48
Framework.

说话人 3 34:11
Then it's like natural origin.

说话人 3 34:24
International.

说话人 3 34:35
Like.

说话人 3 34:46
So for this right connection, everyone connection, what challenges you identify is just so.

说话人 3 35:07
那你的这个 AI 课里面，对于假设我是一个不会，我的语言不是，就是我不会。 Stories, education.

说话人 3 35:42
So what are you doing? Represent different things.

说话人 3 36:05
就是呃。

说话人 3 36:13
就国内就不同语言的人，他们对于自己喜欢的是。我是，就是现在比如说像运动和睡眠，它都是有一个，就比如说运动你走了 5 千米，你就知道你走了 5 千米。吃了东西，你不知道他，其实你并不知道他对你的身体是好还是坏。对，饮食。哪方面会遇到问题？我感觉好像没有什么问题。调查问卷。调查问卷会。对。就会，就是就调查问卷调查的时候就会遇到很多的障碍。有可能就是这个，还有一些就是视频。这个应该，万一有我遇到的。OK，那应该是跟 education 或者是跟 language 有关。那我就会觉得一个是interview。

说话人 3 37:46
那你觉得会有这个问题吗？我们肯定不能做异性，我的问题，有的问题就是会高于那个。道德问题。

说话人 3 38:18
为了保证取消这个道德隐患，我们对高层主要采取的是。关键不是总有人。

说话人 3 38:45
我当时选这个话题有一点，就是比如说这个项目问我要不要做一手调研，但是我这个没法采访，所以就不需要。OK，你们还有问题吗？我在想解决方法，就是通过拍照或许就可以了。

说话人 3 39:20
我觉得应该是通过各种方法让你真的得到一个及时的反馈。任何各种方法，任何方法就包括或者是一些。其实有点难想。可以比，但是其实我是想更加的一个是通过这个是我们所缺乏的，我应该还是会习惯去进行一个潜移默化的改变。就是你要改的。是因为我们经常会，就是比如说在做一个东西，但是我们并不知道他是对的还是错的。就是我不知道，所以就keep。就我们其实我觉得做任何事情只要你有反馈的话都不会，就比如说我跟你说你只要你做一万个俯卧撑，然后就会。

说话人 3 40:29
对。就你需要看到你的每一个努力都是有记录和进步的，就像是比如说你今天做 200 个，就是你能看到数字在变化，这也是一个。

说话人 3 40:51
下一个。受过教育的。没有受过教育的。受过教育的。你这个不需要自控力，你觉得。我想说实话，我想规避的就是。你想规避的是自控。对，因为所有东西如果说你要谈到 willpower 的话，那就是基本上就会等于失败。

说话人 3 41:25
我觉得 formal education 就没有。OK，那我会觉得像我这个组织的话，他不会懂那些关于 nutrition 方面的东西，就他不懂，不会懂什么什么碳水蛋白质，他就会说，ok，我该吃多少肉？对对对。专业术语。营养术语。以及说什么维c、维b、维e，他可能会知道有这个东西，但是不知道里面有什么内容。就大部分很多人像你的那个的话，我觉得不同的教育水平的人，他的对于手电子产品的观念肯定是不一样的，特别是像类似于教育越落后的地方，他们是越忌讳谈论这个，他们是觉得这个可能是。说的越多会对于自身有不好的影响。

说话人 4 42:44
对。

说话人 3 43:08
又帅了。

说话人 3 43:15
可以，比之前好看。现在还有。

说话人 3 43:43
那个。

说话人 3 43:43
Okay. Low income value.

说话人 3 43:56
我觉得像你那个的话， low income background，你说什么电。我觉得不是，我觉得就是你没有。就你指的电子遗产是什么？你指的是比如说一个，如果说一个人他天天发抖音，然后他，就算他的电子遗产，那我觉得是有还是有？因为。

说话人 1 44:48
Activity, the identity factors and then sort of seeing identity factors of the unknown. The other, does anybody would like to, I know just. Summarize your discussion. Anything that to share from her last? Mira, you're looking at me.

说话人 5 45:20
Am I supposed to speak? I mean, you can go keywords.

说话人 6 45:24
No, I was just thinking about it's very hard. And it's very hard. Each of these cases are very hard. But we were talking about that these things also don't define a person. And still there are many things that you define, but for now, that every case depends cuz everyone is different. So again, these are factors, but then you have to really like try to get, you know, the person and then think about human connection, right?

说话人 4 45:54
It's very important.

说话人 6 45:55
And I would say that is the first thing to think about, the human connection. And then that's like the basis of maybe projects to be able to think about this person and how could I connect to them, right? Besides me.

说话人 1 46:22
Yes. Cuz then you consider that important for your product? Yes, for any sort, yes, for that exchange. Did you have a chance to think about, you know, some practicalities, some methods

or calibrations?

说话人 6 46:38
So for the first one, we were talking about someone who doesn't speak the same language as you. We were talking about maybe don't research on the language and on the culture first, and then trying to think about something that maybe you could bring with you besides a tool for like translating or a translator that would get them to feel more comfortable with you. And so, you know, connection besides the language, right? So that, for example, we're thinking about nothing.

说话人 1 47:09
It's almost give you gives you like this task of preparation, like doing something in addition to what you already have.

说话人 6 47:17
Yeah, because some of the tools may feel a bit cold maybe, right? So just not just the tools for something I can connect it.

说话人 1 47:29
Thank you.

说话人 3 47:30
Thank you.

说话人 2 47:30
It's a great example of thinking about, yes, when you prepare for the research activities, you're making, you're writing questions, you're thinking about the theory, sometimes also that extra layer of like, yeah, research around the cultural context in the journey in space that actually can make a really big difference in regards to how effective. Cuz you can research the method only so much, but it's actually thinking about what context will it be applied. Is that when the effectiveness actually can sometimes be really reached a meaningful way. So that was a really powerful example of that.

说话人 1 48:01
And also it's like for sort of vulnerable, marginalized populations, it's often applies to come up with feasible research methods, want to customize methods that you already know to complete that. So yes, it's important any kind of regulation or connection to be made that could be kind of part of work methods that you.

说话人 5 48:26

Okay, okay. I'm supposed this week, I mean, we kind of got a bit lost into discussion of the topic more than this. Yeah, but I think like some of the things that I figure out is quite similar to us. Like it really depends on like the live experience. Like even though you are, you're speaking to someone who is probably the best target audience, they might not be able to like give you a con like contact for your research as much as someone who probably isn't like coming from the similar background to your IRP. Like few things, for example, like suicide, like if you see from the second point of like education and career, there was a point where I said that, oh, like a particular target audience like it, while in this, it was like someone without formal education. So for me, in my thing, in my RFP topic, I said that if someone is not coming from formal education is probably the best target audience. Like for such, I was like, no, it's not like, so there was like this contradiction that how do I see it and how do she sees and what gives the most to the project.

说话人 2 49:46
So yeah, what do you think about, I guess, going back to like the first activity, like what you just said. How do you think working in, with that target group coming from this institution, like how do you feel like your relationship?

说话人 5 50:00
And experience with formal education, in this way, would impact the way that you engage in my group or if at all as in with in relation to my IRT, like I think for me, if someone like does not have, I don't know, this was just a thought that came. I don't know how much of it is like true or not, but if someone does not have a formal education, I assume, and this is probably a good or a bad way to go about the thing is that I assume that they have grown up with like the nature and living with like self teaching and like with the environment and learning from the environment. So for me that like, eh, the for me that mattered a lot in terms of record researching. But at the same time, for such a fact, she said that, oh, they do not have a formal education. That waste to me. They don't have money and they do not understand like concepts of like, you know, like southern world and capital capitalism and everything. So I think there was like this difference in knowledge and I think both of these ways to go about it can provide to the topic in some ways.

说话人 2 51:14
This is an example of how, I guess these type of conversations do bring up like the implicit biases and assumptions that we hold about certain groups. Yeah, and why I guess in like fellowship of researchers and being in a program like this, it's valuable to sort of be having these dialogues with your peers, with your tutors, for supervisor groups to be like testing our, I guess, assumptions about the groups that we work with. So that's a really like profound example of literally just two people randomly talking about this. I have such different lift experiences with the way they assume a community is or was or could be.

说话人 1 51:48
Yes, that's exactly why we did this. It's a really great example because TMU benefit.

说话人 2 51:58
Okay, brilliant. Quickly return. Perfect. Yes, this is short and TV, but thank you. Hopefully this is the beginning of further investigation for you. But I'm really happy.
