总结

Exhibition Plan & Preparation Guide

A guide for students preparing for the upcoming exhibition-style critique, focusing on presentation materials, peer review, and feedback acquisition from external tutors.

Exhibition Components & Requirements

Proposal Report — Printed Draft

Focus on clarity, organization, and proper citations over aesthetic design.

- Must be a printed version of the latest draft.
- Primary goal is to be **clearly readable and well-structured**
- Visual design is secondary; can be enhanced if time permits.

3D Hero Object — Physical Metaphor

A physical object representing the project's core concept, can be a metaphor.

- Emphasis on bringing a **physical item** (e.g., printed mock-up, scale model).
- Can be accompanied by a small explanatory plaque or note.
- Should help explain the project during the 5-minute presentation.

Hero Image — Visual Metaphor

A printed, visually captivating image that serves as a metaphor for the project.

- Must be **original work** (e.g., digital collage, arranged photo).
- Includes project title and student name.
- Should be different from the 3D object and postcards.
- Avoid overthinking; purpose is to grab attention.

Five Postcards — Conversation Prompts

Printed cards to provide context and prompt specific feedback from tutors.

- Size: Approximately **A5 or half A4** (front & back usable).
- Content should distill key project info: research question, methods, insights.
- Primary function is to ask **specific questions** and highlight areas where help is needed.
- Focus on content clarity over expensive printing.

Logistics & Deadlines — Key Dates

- **Exhibition Date**: Next week (Tuesday).
- **Presentation Format**: 5-minute slot using physical materials (no PowerPoint).
- **Peer Review**: Attend a peer's slot to provide feedback.
- **Assessors**: Elise and Robbie (external tutors).
- **Ethics Checklist Deadline**: Submit by noon in four days (April 13th).
- **Final Proposal Report Due**: April 17th.

Feedback Strategy — Core Objective

Use the exhibition to gain fresh perspectives and solve project sticking points.

- Goal is **not just to showcase work**, but to get actionable advice.
- Prepare specific questions about methods, problem framing, or next steps.
- Materials should make it easy for tired assessors to understand and engage.
- Connect with peers (e.g., Oliver, Delphi) to share methods and resources.

Next Steps: Focus on finalizing the well-cited report, preparing the physical exhibition materials (report, object, hero image, postcards), and submitting the ethics checklist by April 13th to be ready for the peer and tutor critique session.

Content generated by AI

The audio focused on the upcoming exhibition, including its requirements such as report, object, image, and postcards. It also discussed ethics checklist submission, primary research planning, and encouraged students with similar projects to collaborate. Content is as follows:

- **Exhibition Requirements**
  - **Report Preparation**

- Clarity and Citation: The report should be clearly organized and well - cited, with intact citations to show the sources of information. While aesthetics are optional, clarity and organization are the top priorities.
- Printed Version: Bring a printed version of the report that has been worked on together.

Component	Key Requirements	Purpose
Report	• Clearly organized and well - cited • Printed version required	Present project content and research outcomes
3D Hero Object	• Physical object required • Can be a mock - up • With explanation note	Visually represent project core concepts
Hero Image	• Metaphorical representation • Original work • Include project title and name	Capture attention and reflect project theme
Postcards	• 5 cards as conversation prompts • Include research questions and specific asks • Printed (half A4 size recommended)	Guide feedback discussion and obtain targeted advice

All components should focus on clarity and effectiveness to facilitate communication with tutors during the exhibition.

AI-generated

Exhibition Components Requirements

- **3D Hero Object**
  - Physical Object Emphasis: A physical object is required for the display. It can be a mock - up, such as a fake one - page of a will and testament of a digital person.
  - Explanation Note: It is advisable to have a note to explain the object, which can be helpful for both the viewer and the presenter.
- **Hero Image**
  - Metaphorical Representation: The hero image should be a metaphor for the project, capturing people's attention. It can be a picture of the object, a digital collage, or a small creation.
  - Original Work Requirement: The hero image must be original work, not just a picture found on Google.
- **Postcards**
  - Conversation Prompts: The postcards are used as conversation prompts to get feedback from tutors. They should provide enough context about the project, including research questions, methods, and insights.
  - Specific Asks: Include specific asks and questions on the postcards to guide the discussion and get the most useful feedback.
  - Printing Format: Print the postcards on any paper, but ensure they are physically printed and easy to read. The recommended size is half an A4 page front and back.

- **Ethics Checklist**
  - **Submission Deadline**: Submit the ethics checklist by noon in four days (April 13th).
  - **Human Involvement**: If there is human involvement and it is low - risk, complete the relevant items in the checklist. Students can reach out to the speaker or the IRP team if they have any questions.
- **Primary Research**
  - **Timing**: Start the ethics checklist now. Once approved, start planning for primary research during the break. There is no strict deadline for primary research yet, but it is recommended not to wait.

    - **Proposal Deadline**: The proposal is due on April 17th. Focus on the report and exhibition preparation first, and then start focusing on primary research after the report is submitted.
- **Project Collaboration**: Students with similar projects, such as those looking at psychology and behavior change, should share their methods with each other. This can help them learn from different angles and gain more resources.
- **Project Insights and Nuances**
    - **Social Determinants of Health**: A student's observation on the relationship between people and food led to a discussion on the social determinants of health. This concept emphasizes that factors beyond an individual's control, such as birthplace, income, and race, determine health.
    - **Health Equity**: Health equity means giving everyone a fair amount based on their situation. The project should consider how to be inclusive of people from different classes, especially those who have limited access to healthy food and resources.
    - **Research and Nuance**: Including research on social determinants of health and health equity can enrich the project and make it more nuanced. It doesn't mean including all solutions but showing that different perspectives have been considered.
- **Postcard Format and Usage**
    - **Format Flexibility**: The format of the postcards can be flexible. For example, 4 postcards can be used to introduce the project, and 1 or 2 can be used to ask specific questions.
    - **Sharing and Learning**: Students can make their postcards individually and then share the digital files on Monday to learn from each other's organization and question - asking methods.
- **Word Count Management**: If there is a high word count and difficulty in reading, try to use graphics such as charts and diagrams. Word count doesn't count for images, which is an effective way to reduce the word count.
- **Follow - up Work Plan**
    - **Exhibition Preparation**
        - April 13th: Submit the ethics checklist by noon.
        - Next Tuesday: Participate in the exhibition, presenting the report, 3D hero object, hero image, and postcards.
        - April 17th: Submit the report.
    - **Primary Research**
        - Now: Start the ethics checklist.

        - During the break: Once the ethics checklist is approved, start planning for primary research.
    - **Project Collaboration**: Students with similar projects should connect with each other, either digitally or physically, to share their methods.
    - **Postcard Preparation**
        - Before Monday: Make the postcards individually.
        - Monday: Share the digital files of postcards with group members to learn from each other.

智能章节

00:11 **Exhibition Presentation Format, Schedule, and Purpose**

> Speaker 1 starts the conversation about the upcoming exhibition next week. All received an email about it yesterday. The information is on the noodle page under announcements. The exhibition format differs from previous work. Students will present their work to two tutors in their own slots and attend a peer's slot for review. The group presents from 1:20. The purpose is to get feedback and show work to more people. Speaker 1 asks if there are any questions.

04:19 **Critique Elements and Report Presentation Guidelines**

> The speaker will walk through elements of the critique. Participants will show the latest version of their proposal report in an exhibition - style format, along with hero objects, images, and five postcards. They have five minutes for a short presentation using materials they bring. The report should be clearly organized, well - cited. Designing the layout is optional; the key is readability and proper citation. A question about specificity will be addressed next.

07:22 **Requirements and Discussions on 3D Hero Objects**

> The meeting focuses on the 3D object for the display. Speakers discuss having a hero object as part of it. Physical objects are emphasized, though digital mock - ups are also acceptable, like a fake will page. They consider if current objects still fit post - IPS changes. Notes for object explanations are suggested, similar to museum plaques. It's noted that the object can be a metaphor, and speakers should explain how it works.

10:17 **Requirements and Suggestions for Hero Image in Project Exhibition**

> The next item is the hero image with the project title and name, which should capture attention. Don't overthink it. It could be a picture of an object, a small creation, or a digital collage. Make it your own work, not just something found on Google. You can use objects in different ways. Print the picture with the project title and name. It's a curation of the project exhibition using visuals, objects, and written words.

12:40 Using Postcards for Exhibition Feedback and Question - Asking

> The speaker explains that postcards in the exhibition are for conversation and getting fresh perspectives on projects. They should contain context about the project, including the research question, methods, and problems. It's better to print them physically and include specific asks for feedback. Examples like including different aspects on 5 postcards are given. The goal is to prompt tutors to help in the 5 - minute interaction.

18:08 FX Deadline and Ethics Checklist Submission

> The speaker emphasizes the importance of the FX deadline, which is in four days. By noon, everyone needs to submit an ethics checklist. The process involves reviewing information and completing the checklist. If there's no human involvement, no further action is needed. For low - risk human involvement (which is expected for all), specific items should be done. The FX tasks should be completed by April 13th, and one can contact the speaker or the IRP team if needed.

19:34 Advice on Report Preparation and Team Combination

> Speaker 1 commends the team for their hard work and suggests they focus on finalizing the report in a day or two. They should ensure the report includes all new information and follow the fix and ethics checklists. The focus is on methods, problem framing, and secondary research. Speaker 1 also recommends Ivan, Elise, and Robbie work together. With some time left, Speaker 1 asks if there's anything specific to discuss.

22:58 Discussion on the Difference between Report and Postcards for Exhibition

> The conversation focuses on the difference between a report and postcards. The report contains all information, while postcards serve as conversation prompts with key info, meant for quick review. Postcards should be visually captivating with text and prompts. All materials, including the report, hero image, 3D object, and five postcards, will be printed. The hero image can be different, and a 3D object like a printed digital draft is suggested.

26:35 Discussion on Hero Image Ideas and Project Updates

> The meeting mainly discussed the hero image. Speaker 2 was confused about it, and Speaker 1 suggested drawing scenarios or making collages. For Amy, Speaker 1 proposed printing a fake library card to show the digital world's impact. The hero image should be one's own work, and collages were recommended as a workaround. With some time left, Speaker 1 invited updates and asked about future finance - related matters.

33:30 **Discussion on Primary Research Plan and Deadlines**

> Speaker 5 has many plans for primary research but is unsure when to start. Speaker 1 suggests starting the ethics checklist now and after approval, beginning primary research. There's no strict deadline, but Speaker 1 recommends finishing the ethics checklist by the end of this week. The proposal is due on April 17th, and the focus should be on the report and exhibition first. They don't need to finish primary research by then, just have a plan.

36:08 **Discussion on Project Research Methods and Collaboration**

> The speaker asks how to use the next 20 minutes effectively. One person suggests using break time for prior research on a project about AI - assisted decision - making. The speaker thinks the person can start self - research without ethics approval. The speaker also notices intersections in the projects of three people related to identity, behavior change, etc., and suggests they share methods. Finally, the speaker proposes a round - robin on updates and asks what would be helpful in the next 15 minutes.

39:06 **Discussion on Social Determinants of Health and Health Equity in a Project**

> Speaker 2 shared an observation on the bus where a young boy ate unhealthy food, feeling sad as it related to their project on people-food relationships. Speaker 1 introduced the concepts of social determinants of health and health equity, suggesting more research. They discussed how class affects food choice and the idea of food deserts. It was agreed that adding these perspectives would enrich the project without over - complicating it.

51:58 **Discussion on Postcards for Exhibition and Assessment**

> Speaker 1 won't oversee the exhibition as teaching at another uni. Elise and Robbie will be assessors, with Elise having a good work overview and Robbie strong in research methods. Speaker 1 suggests visualizing to reduce word - count. Regarding postcards, they can be combined, shared among group members. The size could be half A4. Focus on content and make it easy to read as assessors will be tired. Reach out if there are questions.

关键决策

- **Key Decision**: Prepare for the upcoming exhibition and meet the project requirements.
  - **Problem**: Participants need to understand the expectations and requirements for the exhibition, including report presentation, 3D object display, hero image creation, and postcard design.
  - **Discussion Plan**:
    - Speaker 1 introduced the exhibition format, time slots, and assessment methods.

    - Participants discussed the report format, 3D object selection, hero image creation, and postcard design.
    - Speaker 1 provided guidance on report organization, citation, and visual design.
  - **Decision Basis**: The decision is based on the requirements of the exhibition and the need to ensure that participants can effectively present their work and receive feedback from tutors.

- **Other Decisions**:
  a. Submit the ethics checklist by April 13th.
  b. Start primary research after obtaining ethics approval.
  c. Share research methods among participants with similar projects.
  d. Use graphics to reduce word count in reports.
  e. Design postcards to provide useful information and prompt discussion.

金句时刻

「The most important thing for the report is that it is clearly organized and well - cited, so that it shows where you learned everything and has intact citations.」

—— This statement emphasizes the key requirements for report writing, which are crucial for the exhibition and academic work.

「The purpose of this exhibition is not only to show your work but also to get new, fresh perspectives on problems you might be having in your project or questions that you need to have answered.」

—— It highlights the significance of the exhibition, which is to gain valuable feedback and insights.

「The concept of the social determinants of health is the idea that things we don't have control over, like where we were born, how much money we have, and the way we look, determine our health.」

—— This quote presents a profound concept that enriches the understanding of health - related projects and encourages in - depth thinking.
