`情绪` `夜宵` `后果` `焦虑` `research questions` `next question` `many decisions` `other questions` `暴饮暴食` `many research questions` `specific question` `food decision` `last question` `other specific questions` `next project question` `life decision` `key question` `next thing` `primary question` `healthy decisions` `sub questions` `secondary research` `many things`

文字记录

说话人 1 00:00
Just talk us through how this process went, anything in particular that you have questions about? Yeah, generally, but then we can all get feedback.

说话人 2 00:14
Actually, the last week I just to talk about, I want to like to think about like the supermarket, the food, like design for like the industry.

说话人 1 00:28
Yeah, seems a little different than that actually.

说话人 2 00:34
Okay. Because to like think like a, I don't know, it's a lot of time just to repeat. I just think that not my, I real won't do. No, that's fair. So the real one is just about like Foger behavior model.

说话人 2 00:56
Yeah, just to like focus on like maybe this session will. This one, yeah, it's does not seek to change through the system actual police and to retail environment. It focus on the individual experience of making and evaluating food decision. Yeah, but I have question is for if I just focus on like individual because our DM future need to like consider about like a lot of complex system, a lot of a stakeholder. So I think maybe it's too narrow.

说话人 1 01:39

So my thought on that is any project that any of you guys have that focuses on like individual choice and here that person, so that's like the individual you're focusing on. Yeah, they exist in that like complex context. So like if we have the individual you're focusing on, they still exist in the systems map, right? So even if you're focusing on potential individual behavior modifications or behavior nudges, it's still existing in like the complex worlds that they live in.

说话人 1 02:11
Yeah, so my thoughts around your topic aren't that it would be too narrow. I think that you could still really have focusing. I mean, I see kind of similar to yours, your project being about individual intuition. Yours is about individual decisioning.

说话人 2 02:29
Yeah, right.

说话人 1 02:30
So I think both of your projects exist in that complex world we live in. So I don't, I would say it's not too narrow.

说话人 2 02:40
So why I have this question? Because like in our data future, like this key question, key difference is change. Yes. So the future, their future, a lot of stakeholder, we like maybe ask to like this stakeholder need to change their like behavior change to like to achieve our goal. Yes, but if I want just to focus individual, maybe this one, that's one of absolutely in the complex system, but it's just change their self and not just change the its whole environment.

说话人 1 03:22
But I think for this concepts to exist, you're still focusing on changing an element of society, right? So it's not, you're not just solving for a singular person. Like let's call this person, call them Oliver. You're not just solving for a situation that a singular person has. You're still thinking about how could a culture and society shift so that this concept you have could exist in it. I think overall the arguments you have and the benchmarking you have against like my fitness power Astrava. Yeah, yeah, yeah, I think are good.

说话人 1 04:04
My question is, I feel like this project could get really rich if, like you mentioned in here, that the gamification of this hasn't existed yet. Yeah, however, there are a lot of elements of how people have gamified food.

说话人 1 04:21

My thought, that could almost be, I think, almost a little more radical and working towards more of a like preferable future with so if maybe you're also considering how the current ways that we have tried to gamify eating healthy, eating right, have a really high risk of disordered eating, of causing people to have unhealthy relationships with food. Good. So my question, I feel like that something that could come out of this project is how can there, how can we try to like. Nudge positive behaviors around food, maybe through gamification or something else in a way that does not perpetuate disordered eating. Have you considered disordered eating or eating disorders in this work yet? Let me check what's mean with this order. Like.

说话人 1 05:35
Sorry. Oh, no, rush. This is like another word you use like anorexia disorder and then you, okay disorder eating.

说话人 2 05:54
So I just just like I want I want to eat. I just to just want just to eat. This is just order.

说话人 1 06:03
So maybe look up this word anorexia.

说话人 2 06:08
So it is a seek sickness.

说话人 1 06:10
Yeah, so like the sickness when you get really when you struggle to eat. So it's like the body image. So a lot of the ways that when you're looking at like my fitness pal, especially if you're benchmarking against that is a huge perpetuator of eating disorders. So I think if we're trying to work towards a preferable future, I think you'd have to have a lot of research and grounding around how is the future you're working towards to improve this concept. In your report, you wrote a rep about guilt, a decreasing guilt and increasing agency. Would you remember where you mentioned that?

说话人 2 07:03
Thank you. But actually I just to think about like 3 check right here currency.

说话人 1 07:14
So I think that's right for the conclusion just to on page 3. Yeah, yes. So you, you, so the current way that these things are designed focus on the moralistic framework of guilt rather than like freedom and agency. And I think that's an important way to think about this if you're working on the concept of like gamifying food or making healthy decisions while trying to be sensitive to the fact that the way these things operate now can sometimes lead to like eating disorders, health

obsession. And it's like, what's the difference between when you're talking about like health, you should call Health 3.0, right? Okay. So isn't that what you refer to it as?

说话人 2 08:17
Just like it's about, yeah, the framework is a medicine, big ocean medicine.

说话人 1 08:27
So what do you two think about? And I guess it use, well, Albert, what do you think about how you could be really sensitive of this type of topic and a project like this. Does that come up for you guys at all?

说话人 2 08:48
So what's the question?

说话人 1 08:50
Oh, so how could you see conducting your research and creating this like preferable future while being careful about not per not encouraging like eating disorders and disorder eating disorder eating just to like, like to connect this disorder eating sick to cure not to cure as much, but to keep people safe, keep fit. So yeah, the way that these other tools that you mentioned, they can often be a mechanism that people who, yeah, I don't have eating disorders yet, they use these tools and it causes them to develop them because it gives them so much feedback. Yeah, yeah, yeah, on what they're doing. Yeah, so I think that you'd have to just be really careful about when you're talking about like feedback and food tracking, about how those kind of things are something that can lead to people having unhealthy relationships with you.

说话人 2 09:53
Oh, I got it. I got.

说话人 1 09:55
So I think for your preferable, my idea is I don't think your preferable future is one in which this happens, but I think you do just have to be really careful of like, how are you like encouraging like healthy food choices. And this is the big and a healthy relationship with food. And their body. So I think that this is gonna be have to be important when your focus right now is around how are you encouraging people to make healthy choices around food. Yeah, and what they eat. I think that you're also gonna need to have an angle of how are you doing this while also encouraging people to have a healthy relationship. Yeah, food and their body image. So could you guys think about that? Is that my name?

说话人 3 11:02

Yeah, because I want to lose my weight and at that time I can't eat something I really like. Yeah, but actually maybe one day I would like good anymore and I think it's so important, but actually I don't know why people will don't like their food and why you will have yeah, six.

说话人 1 11:20
Yeah, cuz it's really like, it's especially if you do a little research around this. Yeah, it's like one of the most deadly mental illnesses people have. It has the highest rate of death. Yeah, so it is an illness. So I think that this is like gonna be the key factor in working towards it being like a preferable future and something that could apply to like all people, not just people who or trying to lose weight or people who are trying to like practice the sort of medicine 3 three point now.

说话人 2 11:56
Yeah, I have thought it's like this question. Yeah, in this instance, the result is relies on curate process, body weight appearance that are impresses emotional damage. And yeah, definitely for actually multiple health.

说话人 1 12:14
Yes, exactly.

说话人 2 12:16
So I just like to, it's a, it's process is very single and narrow. So we like to create like multiple dimension to argue your score. Like maybe today you just to hang out with your friend and you eat maybe net health, but we have score for like health maybe has a score for like happy.

说话人 1 12:45
Yes, hello. And so it's like how you feel, how your body feels, your body deals like how you feel. So how do your emotions, yeah, how do you feel? And I think you would also, if you're thinking about this, so thinking about like food, joy and the concept of food freedom. Yeah, so food freedom is something that's talked about in the sort of eating disorder community around how can people make healthy choices but still feel like they have, as you said, like, yeah, agency to still enjoy, yeah, a cultural dish to enjoy your birthday cake. Right. Like, how can you, how can like joy and culture and like happiness, how can it exist in a space where a lot of the tools today currently, as you said, they just give you like incomplete data that could be emotionally harmful for.

说话人 2 13:52
Yeah, so I think in this situation, the biggest problem is it's not visible. Like if you like eat hot pot, you don't know how much damage happen in your body. You just afraid to eat. So if you know, like maybe this will in like increase like how 3 clue color kind of carrier like for your body or

maybe some another score for your body today. So tomorrow I will like eat less to recovery score to balance to the before.

说话人 1 14:37
I think potentially I think that's when we start getting into like, yeah, yeah, yeah, this territory.

说话人 2 14:42
I almost wonder if like, so, so it's just like invisible is very important.

说话人 1 14:48
So what about like joy and like, you mean good versus like numbers and numbers looking good. So I think that a lot of the way is that maybe the current models today are focusing on, as you said, these numbers and also the culture around like you don't eat maybe because you overate the day before because you wanna look good. So how could you have the like values of this concept be based on like both joy and feeling good and like your body? Body function as well. Yeah, so maybe even in that example of hot pot, yes, you're maybe getting data about that increase your sodium level. So you might be a little floated. Yeah, but also like it will make me, it might make you happy. Yeah, right. So I think you can like focus if you away. Hold on. This is, yeah, sorry. It's okay. Okay. Hi, it's Shane.

说话人 3 15:56
这就是我昨晚想吃夜宵，但是我不敢吃。

说话人 2 16:01
但是如果说你知道你吃了这个东西。

说话人 3 16:05
知道我吃了这东西，我明天我会长胖，然后我会很不开心，我会很后悔，但是我当下如果吃了我会很开心，这是我当时的emotion，我的情绪会被这个所左右的。

说话人 2 16:16
但如果说就是你知道你吃了，就是你清晰的知道你吃了这么多，就你需要多少天去消化的话。

说话人 3 16:22
我当下情绪会很差的。怎么办呢？我当下就会非常非常难受，非常不开心，然后此时我还是会决定吃，就是因为我当下情绪很重要。

说话人 4 16:32
你知道我的解决方法是。

说话人 3 16:34
很难平衡。

说话人 4 16:35
我吃完了就把它吐掉。

说话人 3 16:37
那这催吐就更严重了。

说话人 2 16:38
那你那真不行。

说话人 4 16:40
我经常这样。

说话人 3 16:41
那这催吐对身体伤害更大。

说话人 2 16:43
对，然后就会变成他们说那个disorder。

说话人 3 16:45
所以这就是emotions，跟他现在讲这个就很难平衡，其实现在也是我们没办法解决的问题，我现在要减肥，我也不知道怎么解决，因为我晚上就很想吃。

说话人 4 16:53
我之前。

说话人 3 16:53
我也知道后果，但是我没有办法控制当下的情绪。

说话人 2 16:57
就是你那个后果，其实。我知道。你我知道，但你知道的不明确，但你只是哦。

说话人 3 17:02
不，我知道，如果我当下，如果今天晚。点个夜宵。我知道，我要通过两三天可能才能减，或者我前面所有努力都会白费。我知道所有最坏的后果，但在当下我情绪会很崩溃。OK。会达到那个顶峰，然后这个时候可能我就没办法控制，我自己去。

说话人 2 17:17

那如果说就是，比如说我就跟你说你今天晚上吃顿夜宵，然后你需要明天和后天就跟你很明确说，比如说两三天，就明确说两天你可以减下来，就你两天吃的干净点，你会减下来，你会就是毫无负担的去吃它。

说话人 3 17:33
暴饮暴食吗？就是这种心态。就是我，就是今天我吃了，然后我后两天我就不吃饭，我就为了把这天补债补回来。

说话人 4 17:41
然后就会多吃。

说话人 3 17:42
对，女生很多，我就会这样。

说话人 2 17:44
不，不是说不吃，而是说就是稍微减少一点。

说话人 3 17:49
对啊，那你当下这个事其实就是在做这件事情。

说话人 4 17:52
因为人的自控力其实特别差。

说话人 2 17:55
我，因为我也会暴饮暴食。

说话人 3 17:56
对，所以我们也会，所以这就是他说的这个问题。所以你要求自己吃。

说话人 4 18:02
我觉得根本的问题就是减少这个焦虑，你知道吗？

说话人 3 18:06
那不是焦虑，是你当时很饿，你很想吃，其实这是关于你脑子那种激素的运作的事情。

说话人 1 18:12
我跟你说，你不，我跟你说，最好的解决办法，就不要再这么在意身材，那你就随便吃。

说话人 3 18:19
可是人有向美或者向健康的心理啊。

说话人 2 18:23
对。

说话人 3 18:23
要求这个事情。

说话人 2 18:25
其实最应该是就是你在吃那种健康食物，吃够了以后。不会，你不会特别想去吃那些。

说话人 3 18:33
人会馋。

说话人 2 18:34
我知道会馋，就是他们说馋其实是因为你就缺乏了某种。对。那个维生素就其实是因为你之前的一些营养没有吃均衡，就其实我现在说实话，我现在的暴饮暴食情况好很多，就是到了这边来以后，就因为我吃的稍微更健康。因为这个奶好吃。

说话人 3 18:53
对，也。但是人没有你想那么能够控制跟。对，那么就比如说同样，我知道，我如果想吃蛋糕，我吃个香蕉，我就可以弥补这件事情。但是我更宁愿去吃个蛋糕，我会很开心。你吃个香蕉，反而我可能吃完了。OK，我更想吃。

说话人 4 19:11
对，你昨天给我发的视频。

说话人 2 19:13
那如果说你就吃小一点。

说话人 1 19:16
Sorry, okay, yeah, okay. We're really okay. But anyway, yeah, so I think like what would be kind of radical about this approach as opposed to what the current state is if we're thinking about this as a futures project, is how do you contain both? Yeah, keeping track of one's physical health like you've been talking about. Yeah, well, also 2, protecting your joy.

说话人 2 19:43
Yeah, and feeling good.

说话人 1 19:45

And also like, I think you could do some secondary research about like, what is the, like, like cultural, historical, psychological importance of having food still be like joyful and one that makes us feel good. If you think about how people gather over time, how does like the way that we socialize, the way that we relate to one another, the way that we remember our culture. Hum. How is food central to that? And how could maybe the future you imagine be one where we're able to take care of ourselves like medically, while also still like taking care of ourselves like emotionally and socially. Do we have any other last minute questions before we move on to the next project question?

说话人 2 20:39
Yeah, like, I think it's a like a conflict between like technology and like nature. Yeah, because UE field like that food will have like a chemical like reaction in your body. Yeah, but we like just to measure like bloody blood sugar. Yeah, it's a very like a single the dimension. So the, but I think the technology is very difficult to like, to measure like a whole, like a.

说话人 1 21:13
Yes, yes, but you don't have to solve that yet. Yeah, right. So yes, I would say that tech doesn't exist yet. Fortunately, we're futures project, so you can have a little bit of wiggle room. But I would say continue to focus on where we are right now in this like context building stage. I would do more research around that. What we've talked about today around how, what is the importance of not only making healthy food choices, which you've written about well, but why is that important to also think about how we can have healthy relationships with our mind? And bodies?

说话人 1 21:50
Yeah, I think that what you've submitted, you'll need a couple of more secondary resources to support that. So between now in the next submission, you'll obviously start with the next two sections, but I would go back and also add some work around how this future would actually potentially be more preferable if you balance health and like joy.

说话人 1 22:16
Okay. Yeah, joy and like, yeah, and I think you can also like talk to your peers about this. Something we experience every day, right? Around, yeah, like around the pressure to look and feel a certain way, but also like when you're talking about guilt rather than agency, how can agency not just be completely controlling everything in our lives, but also allowing the agency to experience like freedom and yeah, yeah, yeah. Okay, moving on to the next, who would like to go next?

说话人 1 22:47

Another game. Are you ready? Okay, cool. Explaining it for. So 75 today is like left behind, but if you're like 50 in 35 years, we'll be also left behind. So I think that if you talk about that a little bit, it will show how this is a really pervasive issue. What do you guys think about that? Just showing like the scale of how, yes, it's important for these people today, but how we need to start thinking about this really systemically of how this could protect. Actually continue to repeat. What do you think about that? Maybe so this wouldn't be generate.

说话人 4 23:44
Okay, change the age group.

说话人 1 23:47
So I don't think you need to change your age group, but I think you could just validate why this problem is so important by having a line being like, my age group is the people who are 75+ today. But this is a problem that is potentially could impact, you know, all people alive today. So how are we centering older voices now to make sure that younger voices don't lose their voice?

说话人 2 24:15
So if it's key problem, it's key difference, maybe it's like the ability of like to accept the new things.

说话人 3 24:26
Yeah, we can like, so it's maybe even I was 24, but when I go to the 50, I also didn't know about the new things in this age. And I can't get the, yeah, knowledge enough.

说话人 2 24:43
And I think it's like mindshift, like when you like 15 years old, you just say, okay, I know I a lot of things I just don't want. I don't want that maybe I just not I have ability, but I don't want it to like to receive like new message. This is many. I think it's a one man shift.

说话人 1 25:04
So I think you don't need to change this. But I think it could boost your argument to say like, this is why this is such an important futures project by saying like 75 year olds today are dealing with this. But the way that tech is rapidly evolving means that many other generations of people will have to deal with this problem. So this is sort of like, it would validate why it's so important, not just because these people deserve to not be left mount the I've been so unanymore.

说话人 4 25:47
Should I think this age group?

说话人 1 25:51

No, I think you can leave that. I think it would just be adding like one or two sentences about how it could, this is like a perpetuating issue of elders being left behind by like rapid tech innovation. So you don't need to make any changes to this. Okay.

说话人 4 26:14
Move to the next question. Yes, why does the social participation decrease? Because 1 have like a physical and life relate change such as requirement and client health and reduce mobility. Yeah, which make it harder to assess public space and maintain the social activity. So they like due to the net networks, they tend to shrinking their social group and in and the opportunity and the interaction.

说话人 1 26:59
Yeah, I have one specific question actually about, so when we're talking about the technology that is making them excluded from society, what specific technology are we talking about? I think that would help add some focus.

说话人 4 27:20
I also write down some problems on the cuz.

说话人 1 27:24
Yes, is that in the submission? Maybe not now. Okay, so it's just here. Okay. Okay.

说话人 4 27:33
I think for the old people, they have online participation and offline participation. Online participation, more re focus on the digital skill. Like you said, LA last week, online duster of appointment and using a bank edge. Yeah, and online socialization and using the social media and the information look us like this transportation and this problem lie in the they know they even know how to use it because they this like this app or this system might be upgrade day by day. Yeah. And the second one is not. Proficient and maybe many old people don't trust it.

说话人 1 28:38
Okay, and do we have validation for why they don't trust it? Yeah, so we wanna make sure that we have the evidence.

说话人 4 28:47
Yeah, because this elephants for my grandma and grandpa, they don't want to focus many things online and offline participation. This is attending this community event and visiting park and library and chatting face to face. And they have some activities outside the house. They have this because they can't understand others and they don't want to bother us and me. Yes, they want to board, don't want to bother us and please maybe unfriendly for them. And I have

summary some the four main problems like they don't know the rule and they don't want to broaden us. And old people sometimes observe other and they with many hesitation with some intelligence device. So this is the, I mean, problem for as this.

说话人 1 30:31
Okay, so this is a really helpful list. Cuz my, one of my bigger questions after reading this is like, what tech are we talking about? So my first thought is in this list, which is very helpful, I think we want to make sure that we validate the Assumption missions through secondary research. So that will mean, especially if these are sort of the baseline or the center of what we're looking at. You wanna make sure that, okay, they're Val, they're validated. So if somebody says, where do you learn that? You can be like, I learn that right there.

说话人 1 31:06
Okay, the next one is a question I have, you might not know the answer to yet, but what services are currently offered to older Londoners to be more digitally connected? So that would be something to look up to see what is happening now and is it working. So I guess, for example, you can think of like the apple store, yeah, have like specific connect application for the older people. They have them. Yeah, they have like the process for elders, maybe looking at like a couple of local community centers and seeing just like look at their events page, Google, like look up like tech literacy class, like mobile tech. Let us see. So maybe look up mobile tech literacy classes in London and see if anything pops up. So that will show us is that this problem is important. The way people are solving it now isn't working fully. So that will be like, this is where I got all this information. And look, the way Londoners are doing it now. So we need a better future.

说话人 1 32:18
And my last thing thought is kind of the way that I'm interpreting this project, and you can correct me if I'm wrong, is the sort of essence of this is that digital exclusion and the gaps of knowledge that you were talking about, they lead to this increased concept of elder invisibility. So elder invisibility is something that sometimes talked about and it's sort of a metaphor of how when people age in a society, especially a culture like England and London, where elders aren't very respected, how does the, this is almost digital invisibility that they have. How does that actually increase this problem of then not be culturally valued if they can't use apple pay to get on the bus and they're using coins and they're slowing the line. How does that also increase the feelings of younger Londoners disrespecting their elders and seeing them as like a nuisance rather than an asset? So, okay, one month.

说话人 4 33:30
For this scenario, I see so many times like old people cannot pay. Okay, with the Apple Pay. Yeah, and for me, I should waiting for them for many meantime.

说话人 1 33:48
And how does that just using you as a case study, how do you feel when you're stuck behind? It's okay. No judgment. Like I've been the same and I kind of feel like judgmental and rude.

说话人 2 34:01
I think it's depend on my situation. It's a rush or not.

说话人 1 34:06
But that's a good example of like, so I would look up like, how do Londoners, Londoners, how do they, how do Londoners treat the elderly? So that could be a bit of like a cultural research that would, I think, emphasize also the importance of this, of how does this society already kind of treat the elders, like they're either invisible or a nuisance. So like an annoyance. This is an Assumption. So your research could potentially show us how to validate why this is so important, is maybe showing some examples of how that digital divide is actually maybe increasing feelings of like frustration towards this group of people. So before you move on to the next two sections of your writing, I would maybe go back and build out that a little bit.

说话人 1 35:13
So with there was extra secondary research, not only validate these, but also then be like, this project is so important because bundoners do your research already, treat elders like they don't matter. And then how does the tech issue that you've identified, how does that make it even worse? Doesn't make it even worse. And I think that would make your project not only be like, it's important, but it'd be like, whoa, this is so much more systemically. If we're talking about like that system's thinking, that would be like, oh, I could see how all of these things are connected of this like disrespect for the elderly. It's really hard for them to get around. They can't pay. How is that influence? I mean, are like cultural respect for a group making them more isolated, more lonely? Yes.

说话人 4 36:10
I think in this case, I, my topic is so big and my system is so after for research, should I focus the one very small point to make the outcome?

说话人 1 36:32
What do you guys think? Cuz you don't need to do an outcome yet. What do you guys think of that?

说话人 2 36:36
I have like two thought. The one is, and maybe when when we when I do this project, maybe I'll have question what and why the old people should to learn its technology, like what technology

I should learn. Maybe like you like say the OS card to type or apple pay need to because like someone just behind me is very Han angry something. So that's why I need to nourish technology.

说话人 1 37:11
And is that valid enough? Just cuz someone's mad at you, is that valid enough for you to force somebody to learn?

说话人 2 37:16
Yeah, so why do research? I think just maybe think about it, this situation, maybe if I am older, what like I will to like make someone like unconvenient. And this one is what and why. And the second is like, I'm not sure, but maybe like younger people need to like aspect respect for like elder people. So what's the elder people can do for like young people maybe have like some in some aspect have like some suggestion because they're well elder, they have a lot of like life experience. So they like try they're treasure. Yeah, how like, like have a lot of like potential, but we just to ignore them to the hiding them to stuff some.

说话人 4 38:21
Yeah, whereas yeah, I think your second suggestion is really good. But for the first six, a suggestion, I think. Why people, why older people need to learn these things?

说话人 2 38:34
Because the creators bec, because like in this one, like, because you just to mention like the WhatsApp and Facebook as be it, because it's like this technology, the target user, not the old people. So it's not, I think it's this old people just not should to nourish technology.

说话人 1 39:04
Oh, it leaves them behind as well, right? So if these are like, if it becomes, as you were saying, like our culture shifts towards these, be in the ways we connect and therefore there are fewer spaces for them to connect. But I think your second point brought up a really like kind of design. Thank you question of how does this digital divide of knowledge, right? So there's 75, you know nothing about apple Pay, year young, you know everything. Yeah, apple pay. How does that digital divide increase the empathy gap between old Londoners and young Londoners? And like, I think that could be a cool sub question for you to explore of like those moments of when you were talking about like the apple pay example of like that's a massive gap in empathy and understanding.

说话人 1 39:52
Yes, it's complicated cuz you might be late. Got key. I don't know. So maybe also looking a little bit into how like sort of empathy and that cultural research around how do Londoners already

see. The elderly that could, I think that could add a lot of richness to this project. I know this sounds like a lot. And from your question, you don't need to have a solution yet. And I think that you still have a bit of that secondary research to do. Okay. So go back and add a bit of that, and then we'll talk about the next two sections once we're done by C.

说话人 1 40:28
Okay. Yeah, this is such an important project though. Like I know this is a lot of work, but this could be the beginning of some a really exciting project that I think like this country needs. Okay. Ready listening?

说话人 2 40:44
Oh yeah, of course. I think yesterday like the conference, we just talking about like the spectral design, or I forget them for the specular design, the a is like problem solving and be the problem finding. Yeah, exactly.

说话人 1 41:02
This is a little bit of like problem finding, but not in a bad way. You ready? Okay. Let me pull up yours. Oh, wait, that's just, let's correct.

说话人 3 41:26
Okay. First, I do more research about the third topic, the.

说话人 1 41:34
Yeah, I saw you have like a third.

说话人 3 41:35
Yeah, the tension between that one, you literally gives me the juice box.

说话人 1 41:41
It's so chilly. Okay, thanks to you.

说话人 3 41:43
Yeah, and I find some also kind of lectures and practice. And I first I divide into the three part intuition, important decision making, yeah, and trust in one's own judgment and human agency decision making. And the first one is about the intuition in human decision making. I do some research and I found this research told me that what is intuition and why intuition is important. And if we lose intuition, what we will lose? And the second part is about trust, invoice or judgment, and also research and the practice. This taught me that the trust is so important in our life.

说话人 3 42:22
First, for example, if I don't believe myself and I will more leave the AI or approve the internet and. it will be a how to say it will be a。

说话人 1 42:37
Oh, without that, the existential core of making on life decision is existential for me to life.

说话人 3 42:43
Just like it's so beautiful to process if I don't trust my self, and I will do, I will more believe the AI and then I will more don't charge myself. It will be a loop and will be negative.

说话人 1 42:59
Yes, yes, yes, yes. So if you're talking about like, how are you like, you know, those like, yeah, causal loops. Yes, yes. This is a great example of like, you can introduce a causal really early in this, just be like clearly.

说话人 3 43:13
And also the third part is about the agency, human agency, it's making. Yeah, because I found if people don't, people lose their agency and their choices to make their life. Yeah, and then they will have more disappointed and they will feel they don't have their like anymore. They're not their live authority.

说话人 3 43:39
And so this is my research about the third part. And for my IP introduction, I have question about the questions. Yes, yes, because I don't know my question is useful, good enough, or it's narrow enough. Because my fo, I focus on the tension between the intuition and the AI button. Yeah, but my question is that I need to more focus on the intuition itself or focus on the what we will lose if we don't have the institution.

说话人 1 44:23
I think that they're running the same. So I think that you need both of them in your argument. I don't mind that you have this many research questions right now because I think that they can all be sub questions of one another. I guess one of my questions, my initial question was, it would be helpful to understand like, what do we mean by optimization? Cuz that word can contain a lot. But I guess what is really working definition of what it means to optimize means no.

说话人 3 45:00
Because people nowadays, people don't trust themselves. They think maybe they will do some wrong design decision. And now these people will just ask this, use AI or just be other thought. And especially in some apps, you will see the one question and they will give you almost the

same answers. But actually, these answers maybe not should you should yourself. And but people don't leave themself. They just leave there. And they believe if they follow this, they will get a better life. This better life means.

说话人 3 45:35
And also, for example, if I need to done, I need to ask a question, it's yes or no, but everyone told me you should choose a no and us the better life. And if I choose yes, I will have so so what's that? I will have so large precious. I'm afraid that if I choose yes, and then I maybe I maybe it's wrong or maybe it will make me damage or it will make me life worse. Yeah, it is. I deserved. I understand it's not no matter. So the optimize means maybe they, I don't want to test. Yes, perfect, right?

说话人 1 46:18
So I think maybe adding like a little bit in the beginning of just like by optimization in this context. I mean, yes, I had a question about, so I know this is a topic that I think is so relevant to everyone, but I was curious, have you thought about how this would impact like younger people in particular who are in, as you talked about that like live stage of like maybe teens to young adults to early adults? Or are you focusing on all age groups?

说话人 3 46:47
Actually, if I was teenager, I do someone, I do many decisions is not by myself, by my parents, all by my way.

说话人 1 46:56
That's so fair, actually. So maybe adult, like young adults, are you thinking about like 20s,30s,40s or all?

说话人 3 47:03
Yeah, so maybe I will more focus on our age. Maybe, yeah, translate 40. And because if I was out, I don't care about that.

说话人 1 47:12
Yes, I think so. And also between 20 and 40, you're making a lot of big life decisions around where you're gonna live, what you're gonna study, maybe who you're married, like, where, if you have kids or not. So that's like a really rich decision point where you have agency, but you also have technology that could find it. Okay, I'm still on board with that.

说话人 1 47:31
Okay, so those are my first questions. And it seems like you've begun to explore the psychological angle of things, right? So when you're thinking about the like self determination

intuition, one of my thoughts was thinking about how we have, how people have talked about the concept of like information overload from algorithms and like even trying to pick something to watch or where to go out to dinner, how that like has caused decision paralysis or the inability to make decisions. That could potentially be a small addition. I don't think you need it, but it could add a little bit of context to like people are like, are so overwhelmed that asking an AI agent to make a decision for that, yeah, is the easier thing than like sifting through all of the information they have already.

说话人 3 48:23
Yeah, maybe just like I want to celebrate. I will ask I to decide what I eat today. And maybe, you know, because maybe nowadays I think my, my, maybe I will ask AI to advise me what should I dress today because the weather or because the day. So I think it's a most important. What does.

说话人 1 48:57
I think you're on the right market with the big life decisions and like decisions. One of the other questions I had was about like the psychology of the importance of like making mistakes.

说话人 3 49:08
And Scott, have you looked into that? Yeah, I think about mistakes because actually if I do this project, I think mistake is so big things and I can't do anything. But yeah, now I think I do mistake. It's all right and it is just my life and it's elegant in my life. And I think everyone should, you should, you know, the mistake is really important. And yeah, maybe it's a good thing, not just a bad thing.

说话人 1 49:37
And that's like when that's when I'm thinking of you're using the term optimization is like a life of no mistakes. And like, what is the actual like and human risk of like trying to have a life? But no mistake, so you almost become unhuman because you're letting, yeah, you do some mistakes, it's okay, right?

说话人 3 49:55
And it will maybe later your funds, this means mistake will give you an better choices and we maybe will give you a better life. You don't know about that, but you just ignore the same state, but emulate you're from these approaches.

说话人 1 50:10
Yeah, exactly. Are there any other specific questions that you have within what you submit?

说话人 3 50:16

Actually, I just don't know about what this research for, just like I do all markets research and what I finally should do. Okay.

说话人 1 50:32
Yeah, so eventually all three of you will be moving into that phase of like outcome development, but there's a lot of room between there, right? So that's when you're conducting primary research. That's when you're building these scenarios and applying those like futures tools that you Learned in the last in.

说话人 1 50:48
It can be really tempting to just think about like what the outcome is gonna be. But I think that with all three of your projects going through the process and like being comfortable with like the unknown and the mistakes, I think will lead you to the development of an outcome that will come quite naturally. So for the next stage, let me names the.

说话人 1 51:15
So for the next stage of the report, so you guys have done this. We're now moving into how you're approaching this as a design futurist and then like what type of data and methods you're gonna create. So from your point of view, the next thing you're gonna be focusing on is how am I gonna by the future tools that I Learned in envisioning futures, complex system, etc. And then how are you gonna gather that like primary data that you wanna gather? So I would mostly focus on this. If you look at your research questions again, is there one of these that you feel like is the primary question that you wanna have answered. How does, yeah, that feels like the primary one. And then the others maybe have those be like the secondary sub question. So although very tempting to focus on an outcome, the outcome is much less important at this point than it is to begin to consider, like, how are you applying the tools from the last few minutes to examine the work you've done so far? And then how do you feel like you'll begin to like gather some additional information from?

说话人 3 52:31
Nowadays I just choose some research about my topic and I just to know about that. I don't need to think about what comes on. Yeah, I don't need to think about what should I solve this problem, solve this question.

说话人 1 52:48
Yeah, so whether that's sometimes a good thing or a bad thing, cuz it's really tempting to try to solve it. Yeah, but what you can focus on is how are you going to like continue to investigate what you've Learned already and investigate it from that futures point of view? All three of your projects are futures projects already, but now you're thinking about the specific approach and then the specific methods. This is just the proposal unit. So you have a lot of time. So, and I'm

not. I can very much imagine all three of you guys having really incredible outcomes. I'm not worried about it, but it's can be stressful to put it in the back of your mind and I need to build a scenario about so you will eventually it's when you look at like the next thing you're just sort of diagramming right now. If you want to start playing around with the tools that you know, go ahead like that. There's no danger in like starting to play through some scenarios, but you're not in a rush. You don't need to do it today, but it could help with all three of your projects, thinking about like, what is the future of complete adoption of AI for the decision making versus complete rejection?

说话人 1 54:06
Yeah, okay. Okay. You guys have made incredible progress. I would say for all three of your projects, increase the amount of secondary resources you have in your writing. Because I, it's so much easier to do it now than to go back in like a couple months when I'm telling you it again, like you resisted. So you've all done the research, put it in your writing and show other voices. And then, yeah, this is just the, your projects are so wonderful. I know we all have work to do, but the topics are very good and I am excited to see how it evolves.

说话人 3 54:43
Yeah, I have a question about the next tutorial is 8th.

说话人 1 54:49
Yes, so that would be on the 8th. And their individual tutorials, those tutorials on 8th, so these are individual tutorials, will actually do them in the kitchen. And so this will be the schedule.

说话人 3 55:04
We'll have about 20 minutes each and we need to about the part 4 and part 5.

说话人 1 55:10
So yeah, so you'll have done part 4 and part 5 by then.

说话人 3 55:13
And how about the just like the primary research for myself and I will do some diagram or do some, you can.

说话人 1 55:22
Yeah, so that'll be if you look at the template again, yeah, so you'll see that you'll make a design. Features diagram, kind of similar to the ones you'll find at noodle, and you'll look to see like what approaches you'll do. You'll talk about how this is a futures project and then you'll also talk about your primary research methods. Yeah, it's not a lot of writing like you guys have. We've talked more than 400 to 600 words about all of the ways you can collect data.

说话人 2 55:55
Oh, so this is the last week I just to ask the toolkit.

说话人 1 56:02
It's yeah, it's like, yeah, so you'll write about like why, how will you gather data? How will you documents it? How will you analyze it? So this is kind of, you don't need to have done this. You don't need to have done the research yet, but you need to kind of like show the plan guideline. Okay. And I think maybe in the 14th I will have the, yes, good freshman. Okay, so on the, let me see, on the 14th, yeah, we have an exhibition style critique. I haven't received a lot of information about that, but just know it's not gonna be a kind of work. So we, you will have, let me see if I can find the, my God, one side. So I don't think we, I honestly, US tutors haven't received a lot of information from it yet, but it's not gonna be a lot of work. He will have had all the work kind of done at that point, right? Alright, no worries. Oh, hi. She is like, you guys got answer question for us really quick. I was struggling to answer about the critique on the 14th. Can you tell us a little bit about what does it say on the brief? In the brief, we were just looking at the unit guide together. Next week, two weeks right now. It's okay. Also, I just put you on the spot, like major. Yeah, okay. We'll follow up. Yeah, okay. But yeah, that's it. That's our last question. So I'll follow up with that exhibition. And okay, so I'll follow up with that. But we don't need to worry about this yet because just the next submission you'll have is the next two sections of your report. You guys are in a really good place, but you're gonna wanna go back and do have some additional secondary resources added in there. Okay, sound good? Okay, I will see you guys next week. Have a good.

说话人 2 58:11
Oh yeah, cushion is for the last week. I just, yeah, the one is like platform to like a research the activity in London. And secondly, is the, I as curious you about your like a workflow, like how to organize the yeah, research see something I was thinking about that a little bit.

说话人 1 58:33
People use all types of different platforms. I could be honestly just use mirror for mine, but people use notion. Are you familiar with that?

说话人 2 58:41
Yeah, yeah, I know.

说话人 1 58:42
So that can be a really good way to organize your primary and secondary research. It's kind of up to individual preferences. Researchers have different lines. Do you have a good way to set track of your sources, though?

说话人 2 58:56
You like secondary research? I'm not sure that just like a too like too much like a tool to use. So it's separate. Maybe some some like some research in like mirror, some in the paddle list and some in the notion. So because a different tour like give me like a different like a feeling like mirror is very freedom. But when I need to find it's a hard to find. So I just to change to like the notion. Yeah, but knows, yeah, a lot of like to have like advantage and disadvantage. So they just to like want hear the others how to organize their like workflow and their se resource and to sitting together.

说话人 1 59:45
Yeah, so I would say I there's not like a singular platform that I think contains all of those capabilities. Yeah, for mirror padlet and notion in your situation, I would start asking my peers on the course to see what they're using in the benefits of that. But I think the one that it'll be primarily important for you to find one that works well to help you track your sources because you don't want to lose track of, yeah, where you're learning stuff. Yeah, and begin to build that bibliography now, whether that be in my bed or something else.

说话人 1 01:00:16
Hi, I have another, just a look out for our announcement. Every week we put up an announcement on this half of the week hat. So we'll send you information on model. About 15. Okay. Okay. And then it's the best. Yeah, week by week. The eighth is the next one to pay attention to. And then you'll share more that way. Sure. Okay. Okay, cool.

说话人 1 01:00:40
Thank you. I'll see you guys next week. And individual tutorials right here in the kitchen. Okay, we're kind of the kitchen group. Yeah, thank you for that. Sorry, brain pushing. Yeah, no, actually, no, but who wants to be answered? Also, you're coming in for team, right? And superpower 700-527. I'm not gonna have it. I'll say that. I hate fast math and public math. I just hate that. I think I love the concepts.

说话人 2 01:01:10
Yep, sure.

说话人 1 01:01:13
So that would be this one. So yeah, here. And then, okay, this.

说话人 2 01:01:26
Okay, thanks. Cool.

说话人 1 01:01:28
Wait, three, five. Wow, wait. Too much. Oh, okay. See you guys. If you.
