说话人 1 00:00

So it starts with observation. So observation is critical in human center design. So everybody that have done human center design research, no worries. And I'm, of course, I'm also dominated about observation research. And it's interesting because it's kind of like give you that real life or real life such situations where you can understand how people behave without cheating security. So that's why it's very apple. So you capture authentic user behavior and give you insights into what potential to change. I think it's very insightful to do combination with interviews because people tends to say something, those steps they can do in real life. So create a combination is actually quite interesting to see how they say that they would do, defer to what they actually do. Well. So that's why Bible, it's also very simple and cost effective. So, and that's why lots of people put it in there also because it's very, you just don't require much of your interview to do that. Or you can go deeper and then create a procession and right hide a room.

说话人 2 01:33

You can do everything, right?

说话人 1 01:35

It's a quite flexible tool. And so how many proves it became much more popular with UX and service design thinking and products innovation. But also we use a lot into in consumer research for cultural research and IDS, a lot in trends research. So really going to the streets and capture pictures of people wearing stuff or doing stuff or compress. So it's something that can use even if you're not kind of completely connecting with a specific user, you can take connection, go around and see how people, our behavior will address, say. So that gives a lot of kind of quite good insights into what's happening, what's can you be done. So it's really simple. In fact, I

brought you a project which just goes into beyond the understanding what's going on and the simple user today.

说话人 2 02:37

This is a very old project.

说话人 1 02:39

This is a project from IPO more than 20 years ago. And what is interesting about this project, and let me take this off, what's interesting about this project is that it shows how observation can lead into innovation. So it's a step beyond just understanding how people were using a system or product and expand it or improve it to create insights and generate ideas for infection. So Idea is a very good design, ideation, innovation agency. And that process is pretty much kind of follow people around with the camera and trying to understand what could be improved and what the ideas that they can generate quickly. So they follow people around the supermarkets. They agree with that. Filming, documenting, which is quite interesting. How are you going to capture that information that you're producing, and how you're going to generate ideas on top of it. So out of all their ideas, one insights that they got from same people is that people would, so they want us to redesign shopping trolley. So did anybody have seen this project before? Because it's quite a classic. So there is that they needed to resign shopping trolley. So they told people around the supermarket and understand one of the insights is that people will leave the trolley and go to aisles, pick up stuff and come back with a lot of dates holding. So can, there's an idea we could design a shopping that you can take these things, put everything together, and then put back in the trouble and carry on. So that's quite good. So in terms of innovation, that is quite a nice way of thinking.

说话人 1 04:32

So you need to train your eyes. And I keep saying to you in trends as well as like, you need to train your eyes to be able to capture the states that you're using observation and that you can improve, simplify, redesign, focus, undressed needs. But observation is working with the now and the next. You'd collect data as it happens. Is designed to understand interactions, real life behaviors, papers and gains of users. So that's why you want service design, product design. This is very useful. But for us in futures, nice short, it's, it doesn't make that bridge to something that it wants to do a transformative project, it really is going to give you that type of information that you need. So the information that you collecting, the data collecting is also human center and passive, qualitative, it's top level. So that's why it's interesting to solve the next methodology after this. So this is top level face money. People do things this way. So that's where I can improve. That's gains and pain. So that finding it.

说话人 1 05:51

So it's quite clear, it's quite there. It's time scape that if immediate, short term, middle term, so like the shopping trollet, that's kind of like is pushing a bit harder to get into an innovation space and you can, leading to any project or a new product, so rarely is going to be transformational. So that's it. So in fact is incremental improvement, agile ideation, but it really goes deeper than that. So if you have that into your proposal, just make sure what you're doing with the situation. The equation that you receive is pretty much for the necklace. It's not going to address a big topic.

说话人 1 06:46

Okay, so that's how that's look like. So the limitations in the futures project is quite clear. So observation comes here into the improvement. And then we're talking about us design, service design, product design. And you can pushing hard, you can get the innovations, you can understand what Isabel anymore can develop. When we talk about trends, it's often here. The project that I just show, idea project, is about innovating the service project, but it won't go beyond. So you should talk about if your project is about system changing, transformations are structured narrative method, we need to be sure we need to talk about paradise shifts because observation alone is not enough. But you start to decide processes, just kind of push yourself forward. Yeah. 8.

说话人 1 08:00

Yes, sorry.

说话人 1 08:17

Okay, so that is relative to the proposal period analysis or CLA. Any of you are using it in a project? Do you know how to use it? You feel comfortable? How about I'm kind of trying to push nobody else. Okay, so that is the idea. So the idea here is beyond notification. And you have seen this picture several times based with iceberg. So are you seeing other summations up to me? So, but from the insights from the now and talking about some future impact, we need to think differently. Otherwise you're stuck in the same process. So that's that is so how can reach sites with the research of special methods to create a transformation impact future project system. So that's kind of working with Paradigm ships. And I really like to talk about this because this phrase in the beginning, it's it tells everything. We cannot change a system without changing the thinking that shapes that system. So because you end up banging your head against the wall, so you can do a very interesting project and then your client might come back to you. And second, by conduct that because supply chain, I can't do this because that's how we just don't do things like that. So this idea is for you to really challenge your way of thinking. So you stopped by. So yeah, I don't know what segment. Anchester is a tool that is widely used in features to this. Because the focus is to help you think beyond the issue, the superficial layer that what cannot be observed. And Chinese to delve deep into these layers. Two would to unify the beliefs that sustains that partly. And the aim is to change the story.

说话人 1 10:31

So after we think about how we're going to look down into this iceberg through the layers. But the reality we're trying to do is going back up wants to go down. So that is the difficult bit of it. So that's the aim is to change the stories, the narratives, the root of the issue, so then you can unlock your potential to expand for the future because we also set into that ways of thinking.

说话人 1 11:09

So that's how it looks like. I used a quite simplified version. So it's often for listening. I actually quite like to call it to headlines because headlines, it's easy to understand what it's about. It's about what people talking about. I'm going to go through this, but like when I think about the soft layer is litany of what they call, it's the headlines. And then you get into the systems institutions that you can see. It's kind of like quantitative observation. You can touch into the systems, but perhaps not in depth enough to change what the system is going to look like. And then it goes as well, feels and the best force and means. And then this part is the keyboard. So that's where it looks like.

说话人 1 12:05

Layer over there. So you have the headlines for this name, which is the discuss the issue at the level of newspaper headline without much context. So why do you hear about what people talk about? What you see face value, what people talking about the voice program around social media, trendy, as well as like, but what is, we don't have the context. We just know that can do it quickly. So often when we're doing this methodology, this bit tends to be quite easy because you can easily talk about here, so etc. And I think of now the layers, things tend to be less easy and you require more of your thinking. So. Stay with that, you needs to stay with that discomfort of not being in workshop. But that's all fun. Could be a bit painful and a bit messy and fun. So second Layer is about systems. We look at the course of the headline. So by analyzing the relationship between people, systems. So we need to understand the different players, how they react towards the systems and institutions. So kind of what is driving the issue. So that's the system. And then you get into the world rules, which is harder because also make you think about what is the kind of like, how is the mindset in finding such frame that you should, all the assumptions that we have that shapes the way we think about something or it's considered normal, acceptable. So how we act, how we relate to that.

说话人 1 14:00

So issue in a more mindset level. And then you going to the the debt, the proper depth here, which is the mid and metaphors that shape that stories, which is how we tell ourselves about something and some things that are kind of related to culture, to history, we don't even think about issues. That's how we can just think about it because things like that. So that's the point that we need to challenge, put some reference here, which is quite interesting and they're easy

to explain. So you get to be a model and that's it. So what we want to do is shifting the narrative. So when you get into the bottom of that layer that I said, you need to start to think about how do you work with this metaphors up to the top, to the headlines again. So halfway changing something that we pay for granted or we just accept it as it is because this is our reality. If you challenge them and change it, how then going back up the iceway would change things. So that's the beauty of that because that's kind of the narratives that we change. And then through different narratives, we can actually open up possibilities of much more research. I didn't understand. Super sorry, guys.

说话人 1 16:04

Some animals, yeah.

说话人 1 16:21

So go to the case study. And especially, isn't it someone actually created that, but it's a real easy way to us to engage with this methodology. And it's the CLA of . And that's kind of like quite easy to understand because everybody who knows. When you put this table, which is for indicators, like the things that you can easily understand the fact what is that creates and the inside traffic.

说话人 2 17:00

So it creates in this way.

说话人 1 17:02

So cla headlines, when you think about , you think about code crap. Third, mess, accidents. So that's the thing that we talk about when a customer aligns, and that's kind of like this idea of shame or horror of you. So if you have an accident, it's often connect reviews because it's KQ, it's an offense. So if we can call someone or situation is like, is offensive and maybe things like that, you don't like TikTok. So it's something in the bag. So you really have kind of like, okay, that's the top play. That's the easy one. You may get into the systems and institutions that are related to who, sewers, toilets, city planning. So you want to get rid of that luxury. So what was the systems that deal with Queen? And then you cut a project. So why is it so you need engineers and it's public health socialists instructor. Is structure and infrastructure related to that issue today with that. And that's inside. So when when you're doing this like, oh, the inside service, you just want to see it. So over this should group researchers are created to you don't need to sit.

说话人 1 18:38

Okay, so now I have the headlines where it is and the systems and then we can come back to the world feels it's diff, diff. There's much less that we can talk about. But often when we talk about Pearl, we think about digit diseases, hygiene, social order. So if you link someone that doesn't have that structure is probably quite under developed. And it's if it's expose, you're exposed to

all those risks. So that's our own worktails. Then it comes into science technology, or it's modern that you don't see the proof. But this is, if you've undeveloped probably everywhere. So that's kind of like our world. Yes, in that level. And then you get to the rest, the mix of the metals, like how we talked about the things that we're not even think much that we talk about it, but everybody can say that's like, oh, this situation, we do it. So we're kind of like going back into this company. Good. Because we told us this is something really bad. She discussed bad. It's so the fact is that we want to get rid of that thing, something that we do that make us close to animals that's a bit, the myths that we have around that metaphor that we use wants us to get away a household of our natural instant query. So, and that is kind of like the insight is that if we change that mindset and that attitude, so instead of who would be a taboo, what it shakes us, what it represents sheets. And that is kind of what we're going to do today.

说话人 1 20:42

I'm going to have due to the second part of this, which is coming from bottom up. So if we change the world, there's the metaphor that makes, which is easy, then coming from the world that needs to change how it goes up. It's then it starts to create different workflows, then different workflows can then change into different systems and then different institutions and things around this. So that is a bit, so if you're working in a project that is transformational projects that you really want something to change systems and governments and ways of actually we need to understand and talk about things because they represent lots of things that are not going to go false because our mindset don't allow it, something like that.

说话人 1 21:46

So that is a answer question about Peru in Japan that in Tokyo that happen two weeks ago and he was trying to expose his other place. So too, and here we go. So from something like that, you can actually change your relationship to it. So minus 3,8 now. So this is like for granted because this is a kind of project that I just talk to you about why I want you to come this way. So I'm going to say two waves, like 1,2,3,4,5,6, perfect 6 briefs. And I will give you some times to debate and to think about how from this diagram here, and if she wants to add more, fine. How it could, what would happen if we change it and then creates the new analysis all the way up. Okay, so we're going to give you 20 minutes to do it. And I'm lucky to share afterwards. Is it good?

说话人 2 22:54

Does it focus here?

说话人 1 22:57

But you need to talk to each other. It's not easy. Sit with the discount skirt.

说话人 2 23:09

Exactly. You can come.

说话人 2 23:33

干啥？哎呦，伦敦这个逼交通。

说话人 3 23:45

你要拍一下吗？有。

说话人 1 24:32

thank you guys do you prefer to separate the tea grade or you good。

说话人 2 24:38

yeah, it's okay。 it's okay。

说话人 1 25:07

The hearing solution.

说话人 2 25:19

No, it's not the same thing.

说话人 1 25:22

It's not. So council layer analysis, you often go there, but here we already done.

说话人 2 25:29

So this is fine.

说话人 1 25:30

So this is how we think about those things. So you go down when you get into this point of the Mets and metaphors. So this is what helps today. But if you change it, so if you change that, that makes it and that matter for something different. So not like if today we say that purse, the booth, but if there is something they show around, this is like who, how to change the way that we think about something simple like that is like, well, let's change. It was nice to shows everyone likes to show you through. And so what happens to the world feels? So what world feels are there that can allow you to show your full website? That's good. So it's a symbol of how or symbol that you care. And then what happens to the systems is the systems that relevant me to put the pool is to kind of like showcase how beautiful, but it's a bit of that. It's kind of like it needs to be challenging of your experiences. Even if it's unrealistic, it's fine. And then to the top of like how we would then talk about food in that world, but you create a different world where talking about food is not bad thing. It's a good thing or is an art or is this always so for example, like dreaming about what results. So we, for example, without is that yes, depends on the issue. In this issue is the . Okay, it's just an exercise. So this is the current health mix. Change them, all

of them, think about them in different ways, and then you're getting that pop up. How are you guys? Yeah. Okay.

说话人 4 27:31

他就是说现在。就是改变他的逻辑，就是比如说他说的是屎。

说话人 2 27:35

就，对，就是说现在我们觉得是屎。屎是好的，屎是对的。

说话人 4 27:39

然后从头下往上。对。就是改变一下世界观。对，我们就要从世界观入手，比如说现在我们就说这个屎它是一个很好的东西，它是象征你是个健康的人，就未来的人可能他们都不能拉不出屎，然后只有能拉出屎的人才是健康的，所以说他们就再去展示，然后你就从下面往上推，就是他们会发生一种什么样的变化。

说话人 2 28:01

明白，OK。

说话人 3 28:03

我大概明白了。

说话人 2 28:06

OKOK。多少是有点恶心。

说话人 5 28:19

收集屎尿屁。

说话人 2 28:23

头也不疼了。

说话人 4 28:39

那现在给他一个什么底层逻辑呢？给他一个什么改变一下他的底层逻辑？

说话人 3 28:44

就是他说的。没有。

说话人 2 28:46

屎是黄金。

说话人 6 28:47

屎是。拉的越多越。

说话人 2 28:49

越有钱。

说话人 4 28:52

屎代表健康。屎是屎，现在是稀缺资源。

说话人 3 28:57

这个他们都已经说过了，这个上面有。

说话人 4 29:00

有吗？哪说屎是稀缺资源？

说话人 3 29:03

没有说稀缺资源，但是但有时候说是代表健康。

说话人 2 29:09

就是，中国人不是都说耳屎越多越有钱吗？现在就拉的屎越多越有钱。耳屎，真的吗？我觉得我们那边是有。

说话人 6 29:32

那我们现在是要假设一个东西。

说话人 4 29:33

对，现在假设他一个最底层的一个世界观。

说话人 6 29:40

屎越多越有勇气。

说话人 4 29:42

OK，可以。

说话人 3 29:55

我觉得这X。去，不做也罢。

说话人 4 29:57

去赚钱去了。

说话人 2 30:09

就在未来，穷人只能吃能量胶，但富人都可以，还是可以。

说话人 4 30:16

对对对，就是吃。

说话人 6 30:18

健康的organic。

说话人 4 30:19

对对对，就是因为我們身上营养剂它不会产生。

说话人 2 30:23

对，而我们又不能说它健康，我们要说它有钱，健康的太 normal 了。

说话人 4 30:38

因为未来的人们会吃营养剂，他们不会产生废物。然后通过这个底层逻辑往上推呢。

说话人 3 30:50

哦，我知道了，他的意思就是说让我们重新做一个世界观，后来想着是文化，比如说我们先后来再想想看未来这个事情会发展成什么样。

说话人 2 31:04

我们就不会做，随便说。

说话人 1 31:08

然后。

说话人 4 31:34

厕所变成社交空间、展示空间。只有富人才能一起。

说话人 4 31:54

是。日本人确实，然后他们会让，就是那种Virgin，然后吃不同味道的那种水果，然后让他连续一个月还是多久吃那个，然后他就说会有。

说话人 2 32:13

为了什么呢？不知道，这个我很小的时候就听说过。

说话人 4 32:19

哦，我小时候也，我就小时候听说我大为震惊，可能是模仿一下那个什么猫屎咖啡吧。

说话人 2 32:27

人屎。

说话人 4 33:22

所以他表象成就是一般家庭都没有厕所。只有富人家庭里面有厕所。

说话人 4 33:40

会就是屎代表身份。那为什么只有富人家庭有厕所呢？因为穷人他们不需要这东西。拉不出屎。因为他。

说话人 6 33:52

没有东西让他拉。对。因为他都吃营养。

说话人 4 33:55

因为他都吃营养剂，就不会产生废物。

说话人 4 34:05

还有其他世界观吗？还是就发展这个？想的有点抓马。

说话人 2 34:14

因为就越抓马越好。

说话人 2 34:32

我觉得我们现在的 worldview 很。看朋友圈了。很什么？看朋友圈。

说话人 4 34:42

看朋友圈。

说话人 6 34:43

我们死之前能实现这个吗？有点难。

说话人 4 34:47

这还靠片了。

说话人 1 34:57

没。

说话人 4 35:07

那他们是不是还会对进行一个分析？比如说从他们吃的食材越高级，他们形状或者什么颜色就会更加的那个。

说话人 2 35:23

根据屎的状态来判断这个人到底是多有钱。对。

说话人 6 35:27

那种越接近证明那个人越有钱，因为他吃的东西。越均衡，对吧？对。

说话人 1 35:36

Stable idea and language is the language that shape the bird.

说话人 2 35:43

然后他们的 Linkedin 就是放自己拉尺。

说话人 1 35:51

Connection. Part of work.

说话人 2 36:00

你可以。

说话人 6 36:09

我觉得我的 GPT 太正常了，它说什么人体废弃物质是资源而不是羞耻。人家不是说用利用它作为资源，你那时候很职业的那种钱。

说话人 2 36:30

我天。

说话人 4 36:35

他们可能还有类似于像 sheet 的一个形状造型大赛，因为他们有原材料去练习，就是未来的最有钱的 graphic designer。

说话人 2 36:58

还会有设计拉屎的形状。拉屎选美大赛。

说话人 4 37:06

比如说看谁能拿最有高能，就像是他们现在会用什么。

说话人 2 37:14

各种维度去。

说话人 4 37:16

就。

说话人 2 37:18

形状大小，重量。

说话人 4 37:21

就不是那种有些人可以用什么石头打结，然后有些人可以用石头打个中国结出来，如果说能拉一个中国结出来。

说话人 2 37:34

3D 打印。

说话人 4 37:36

3D 打印。

说话人 2 37:45

真有点意思。

说话人 2 37:56

然后就一个字不写， Joanna 来就给他一顿输出。等一下。

说话人 2 38:26

对。你跟王天都在小教室吗？

说话人 6 38:31

诶，他没选这个。

说话人 1 38:35

OK, pay attention everybody.

说话人 1 38:57

we so we do not. Might just come first day, but we thought of like, how did we get in some sense.

说话人 5 39:05

So we saw shift as cleaning and we also thought that when she came up and came up at, okay, ship is the emoji is actually not shared. It's like a chocolate ice cream. So we just would build a term that's used, which is just chocolate, meaning basically means that it's meant to be something, but the society is taken it in a different way and then ship as relaxation and cleansing, which is, yeah, so which is what we gonna took as a point to move about. So the

world view, we saw ship as an extra hygiene product that you use negativity and different, because different people are different types of shape. It will be used as a product of identity and also for detox. And then for system and institution, we saw doctors and scientists, which what they already are using it, but they would use it for effects and a lot better trouble because I know, yeah.

说话人 5 40:33

And then for headline, but we were still working for a system, but for the headline, we have spent several teams for, you know, having a very good. Yeah, but to be fair on like all the senses, like it is already the same, right?

说话人 1 40:50

If you haven't by the version, not good. So in 24, you get today, that's our group. And even if you know there's some needs, there's still free. So you need help. Yeah, yeah, you're still free. So it's very align that people would say establish of machines. Yeah, so that's very, that's where that the top layer change the headlines.

说话人 1 41:22

Yeah, you said because like, oh, I just got this full template. Okay, no, that's good to have friends too. So that's good. So that's really good. It's good to have the best part quite clear and the world feels it's kind of like at what we think about that issue and then the system is replying to that well. And then, well, then I create this, the systems and institutions that create the headlines, the new headlines. So then you watch the new headlines, whatever they can say or you see people talking about the rest. But the best next.

说话人 5 42:26

Hold on. So actually, our thinking is that shape to the worldwide and in this world, the sheet, it has become a symbol of power and wealth. Yeah, it's really good technical change based on the background because ordinary people 2 is only support for the wealth, the power and the normal people stay influence is some, some hills. I wish, baby, oh, didn't chase, don't cheat anymore.

说话人 1 43:10

So like in some office, there is no there no toilet, only the fourth office.

说话人 5 43:20

At the toilet, the worker school, she can know is that this kind of words. So she has become a single power and.

说话人 2 43:36

我们还有是拉琴，学乐器要从小练起，要考级。 Yes.

说话人 1 43:43

I don't think you're good to say about is that it's working with permits and that's what it's working about the language. So it's just kind of like, kind of quite clear.

说话人 1 43:52

Oh, was the major problem. Who in that world that would say so? Who is, well, so that is domestic and cool as well. So I wasn't well, there is that like if you're a person with. How about you have the rights and then and then exactly then you get into the street because you say like, okay, so toilets are you the rich and then yeah, that's pretty it's just say kind of working on the in the past course as a language thing because the language shape. your well your thinking and then thinking shape the system shapes。 very good OK three groups and then we finish Oh then I have one last thing to say but you guys。

说话人 2 45:00

Yeah, kind of experience.

说话人 1 45:06

Exactly. But you need to change that. Yeah, that's perception. You guys, we're almost the same. External, sorry, we're almost the same because you already, yeah, as you, yeah, we have together. Okay, so you too, that group in the back, come over again. Hello. Listen, who is.

说话人 5 46:09

So as well with whatever we talk about two level service way of food.

说话人 1 46:18

The food is the soil favorite food. Yeah, amazing recipe. And then, yeah, it'd be connected to the or view as a research customer view responsibility of the new resource energy. We go like that. And then for system and institution, you can, yeah, you can talk about that.

说话人 3 46:47

Oh, at least it can be useful as a resource.

说话人 1 47:00

E commerce system.

说话人 3 47:05

Right now.

说话人 2 47:13

If we think about clue as a resource, then we need a system like we need to collect the clue from improve and then people don't think about luxury Turkey or scroll.

说话人 5 47:27

That's not. So we need to make the system to collect too effective.

说话人 2 47:33

So the backup system.

说话人 3 47:39

So that's, and then how you change like your, what we talk about additionally today, in the future, who can represent individuals healthcare.

说话人 1 48:01

So, but then, but it's not connected to the resources. So the headlines is the resources.

说话人 3 48:09

Like, yeah, we can show off.

说话人 1 48:13

I don't know.

说话人 3 48:14

But yeah, yeah, also new.

说话人 1 48:17

So if it's a resources, you have all these things to collect to create three super more people will be talking about.

说话人 5 48:24

People will like they want to gather threshold to.

说话人 1 48:31

So we will like take the market to sell worldwide the high code who yeah, in the market because who is relate to the resource and resource can be their home energy or mechanical energy, 5 energy. So maybe, yeah, amazing. Yeah, very good. Cuz then we'll kind of, okay, so I need to look up my diet because I need better foods for better energy. So yeah, yeah, yeah, yeah. So you change a lot. It's pretty good for those two. I think you're in a good direction when you do something that is more provocative or a word, a world that is more dystopian. Like if you do not even craving anymore because you just eating spills, you need to think that this is a tool to

direct preferable features. So it can be, of course, it can be used in this way. It's completely right. But it's also a tool to change how a policy is accepted or how people are taking it. So try to always think about what will be a preferable way of dealing with this. You should just as a way last week here. Thank you. Before that, everybody starts to marriage.

说话人 7 50:29

So we think like, I was thinking like, could pay some kind of issues if it will be hope is actually some kind of fun because who is reality? Who is always like joking ourself? We're pro, we're drop where we should be in the rubbish team. So we're good. We're fine. I keep the word things company. Then everything will be shown enough. So if cook is fun, there will be cool or comedy. And if there's comedy, there will be TV. We can, if like food is some kind of joy, we will have collected, share toilet, people shaking together, rewarded for the quality shape. Yeah, so that everyone will carry with the shape shift.

说话人 3 51:43

Understand people will not shake.

说话人 7 51:53

They will make shake baby shake. Yes, and shake my in that Wechat. Shipping. Yeah, sometimes ID.

说话人 6 52:11

Okay, push ship.

说话人 1 52:34

Absolutely . This is about before you start doing this, just make sure that your places role here is not doing the process itself is moderating because you need voices, you need people with different is to challenge each other. So this is a very quick exercise, but you actually need to go deeper in issue and really challenge yourself and go back and forward. So you better work because I'm operation moderator. So prepare yourself to recruit the right people, experts, someone that had experience in that topic, on that issue, because then they can talk about from experience and not only from high level, choose a group with the best perspectives. So people that can ads to each other and not if you have just a group of the same type of people, for example, that you're going to challenge yourself enough have been changed, allowed for messiness.

说话人 1 53:42

So this can get complicated, but you go back and forwards into the layers, it get messy. People need to go back. You don't know if you put it in the right place. So it's messy. Click sign to rework, to adjust. And yeah, and again, the tip of the layers goes, the more thinking is required.

So to get into that metaphor really needs time, thinking and crafting. So we did it quite quickly, but you should be really thinking about what's the message. Oh, because again, is the language that drive your mindset then will drive the rest. So think about that forward and kind of competitive and that's it. So just helpful, be ready to moderate people to instigate the consumption. And then everyone has some interesting results. Magic, expand your research, those Facebook special, expand it, create new analysis. That's it.

说话人 1 55:09

The research method that uses personal experience, auto meaning cell to describe and interpret. So anything that's describing or interpreted typically ends in gruffy.
