说话人 1 00:00

Talk about what you will be presenting and what's the nature of that. And then on Thursday, you're gonna have a session in the reslab workshop.

说话人 2 00:09

Yes. So with Louisa, basically we will divide all students through two groups. And like each group will, the first group will go at two times 10 and Louisa will talk about how to treat what I'm sure here right in your ideas and like, and I don't know if you have ever seen today this will happen if this can this room and she will explain how to visualize guarantee. Maybe I think did you mention that? And then session on Monday. So yeah, Janita will, eh, with Judana will give you another session on how to repay efficiency, that whole algorithm. So this week is really about implementation, like visual, how would we drive the ads.

说话人 1 01:03

And second of that exhibition can, right? Week No. 6, finalizing any outstanding form for safety. We gonna be, you know, keep that true story will last. We reach and understand and talk about the road match. So theory of change that you are proposing. Remember, you already had a contact sign with Alicio about your interview about strategy. But in this, by the time you reach this, you don't like to reach or you like to hear what is your key, what is your code that looks like, what is your strategy. And then, yeah, again, in week number, in Week 6, you're gonna have some optional computation as well. And the most important deadline after Week 6, we don't wanna, we don't want you to do any private research because, go ahead. So make sure that's a pretty important deadline.

说话人 1 02:15

Remember, by the time you reach 19 June, Friday, the 19 June old, the primary day, a collection grew free company. Yeah, we have put that deadline by considering the time frame, by considering the workflow. Okay, and then you have no study and then you have, I have the realisation project. In other words, just make sure what sort of an output that you're gonna be exacerbating. What's the, you know, what, what are, what is the content that you're bringing in so that we could like see how it looks like. And then in that city we could give you feedback so that you have enough time to do the necessary changes to get ready for a real big day.

说话人 1 03:11

Yeah, and then there will be some self related study done and we are working on with some colleagues to figure out how we could give you some access to photo studios and we will be able to, you know, capture Nobel professionally. So there are new, it's working progress and you will hear from us in due course about what this photo show is all about, what you need to bring in and what's the importance of having those images for your portfolio.

说话人 2 03:42

Yeah, so this is gonna be with like a professional photographer so you can take picture of your product, your like the things that you're, you want to bring to your, yeah, exhibition so that if like you have professional pictures that to show as well.

说话人 1 04:03

And then and then yeah, it's and then this is like this number ten. By the time you reach Monday, the sixth July, if you are, this is another important deadline if you are thinking about having a magazine, having, I don't know, like any printer elements for your R C April 26 extension. It's pretty important that you know something that could you build for a review. Now, if you have something, let's say a magazine, for example, or I don't know, like a literature or whatever, you could use the professional picture that you have taken last previous we put together and send it to your tutor. The tutor gonna go through that. Probably if there is significant changes to be done, you will hear from your tutor. Otherwise, by the time you reach Thursday, the night on the Friday, the 10, you need to submit that to the RCA print. To a workshop because they need 48 hours, need time to print stuff. So just thinking about the time frame. So make sure that you, you know, you have your own.

说话人 1 05:11

calendar then put these data. Lines there so that you, you know, you don't miss any. So again, just to be clear, if you are printing anything for your RCA 2026 and if they are pretty important to you, make sure you follow this deadline. Send it to the Print workshop for the 8 hours in advance so that they can give you before the deadline. So before you set up your payment exist. Okay, good. Qos is final review.

说话人 2 05:41

I mean, yeah, because this is just before the, yeah, so on the Monday, you also have the deadline of the. It's not so this like Janita and Gigana will send you like the format of the template. And basically this is what like it will be a standard for all of you and you need to complete it by the fifth of right? And this is like one of the expected deliverables from you. All right.

说话人 1 06:10

So, and then we have the show. So you gonna have, you gonna install this, the exhibition, you install three days. And then on the 16th of July, Thursday, we gonna have the private field. But in the morning, we start the assessment. We're going to talk about the assessment between the next couple of slides. But just following for after you set it up the stool, there will be an assessment component in front of your Iron Square sessions. I can run up to the Sunday, the 19th July. And in addition, so yeah, this important.

说话人 2 06:53

Some of you, I think Ramli and Rama actually took part of this volume. Yeah, so this in volume is a very important event for the same future is basically where you like, like you show what you have Learned and what is the same user to you. So I expect at least 10 people to connect this event. This is a like a fun benefit. We will do it together. I cannot do in throughout the an organization of this employee. And actually you can put this on your CD. So, and like, of course, again, doing this important manual tech pictures and do chat and reviews of you can also get that communication. So this is some pictures of SK show 2,025.

说话人 2 07:50

As you can see, like this last year we had like faster. This year is a little bit more free. You you're not require faster, but of course you can see here some of like the displays of our students from last year. And this is what more or less we are expecting. These are some pictures of this important. So a lot of people, we are inviting experts again. And what the nice thing about Simple Thing is that it's like kind of we're like you protagonist on stage together with experts on the field. So it is nice. It's kind of like, like, yeah, like a dialogue between experts and students that are becoming experts of the benefit.

说话人 1 08:55

And then, I mean, the installation taking place on Monday, Tuesday, but Tuesday morning you have your final boosting behavior. And this is about reflection. Because as part of the, you know, this whole journey, especially as part of your RCA development display, you're supposed to be collecting, you know, feedback document in your engagement. And then this tutorial session is all about a post quarter, right? About your display, about your experience, and also finalizing the outstanding elements of your IRP realization before. And I will deliver. So this is the last contact

I. that you' re gonna have with your tutor to resolve and finalize your submission。 and then you have three days and then you have Saturday Sunday and then you rock。

说话人 2 09:52

Alright, so now, should it be deliverable? So if you want to open your mood, yeah, yeah, yeah.

说话人 3 10:06

Sorry, one on week, first week, which week? Because I think some of us are going to the teacher's day then.

说话人 2 10:22

Yeah, so we might miss that. Yeah, so you can contact your tutor, okay, and like explain like you can organize yourself. I, I don't how, how many do you know after how many students are for you think okay, so it's just the age of you. So you that's why we didn't change much. And I think some of you together would be there. So then I don't know if you have to do it together. So maybe you can do a tutorial next.

说话人 3 10:55

Hello.

说话人 2 11:05

And if that needs to be recorded, yeah, we can do that. So we can record like the most important.

说话人 2 11:35

If you want, you can open your eh on on model, you can open the unit brief and follows a and they deliver both. But this is like an opportunity of the all the deliverables. Of course, the peak time of your work would be the IP report. So we are expecting final TTS using the provide template. We can show the template later, but it's already on Google. So if you want to open that as well. And if you have any question, please answer, please ask her.

说话人 2 12:11

Of course, the final template will be, will have two kind of components. The first part that is the proposal and the second part that is the registration. What we want to see is like a Korean kind of final and final report of your research. So try not to repeat things that you already say in the first part. So it should be kind of easy to read this. Why? Because we want to for you to have like this kind of record that and after when you finish your master, you can go outside. You don't have to touch it anymore. So it's ready now just for us, but it's for like, and to second to you and your next employee and then say project output. This is like basically your, it can be your infographic, can be your product, it can be your experience, but whatever you're producing, of course, this should be included in the final record.

说话人 2 13:18

So we, that's why we organizing the picture section so that you have like a professional picture and you can take picture of your but or whatever you're appreciating. And then what we want to see is the reflective evaluation deliverable. And this is also within your final iappeal port. And here, you know, you want to hear about all your top, like your journey, what you like and what you didn't like, how like you, you can, what you can improve, what you want to do after this and then so forth. And then there is the presentation. So during the exhibition, we, you will, as I 5 minutes speed up, right? And you will present your project output and tell us like what was the objectives, what are the question, such questions and so forth. And then we want to see the engagement strategy. Actually, as some picture is you should explain. So last year you can, so these are some engagement strategies that they use.

说话人 2 14:45

So for instance, Charlie, she produced like, and about two. Who with the year and like she was asking people in, in during the show to experience the and. and experience or like creation. You need for last year, he was talking like he was working on multicultural diet and they go live by chain. So he brought a lot of fruit and he was explaining how different fruit taste differently if you buy from different countries. And so on, so forth.

说话人 2 15:21

Eh Yitong, she was basically asking participants to give information, then write a story about like something. And I remember now, contract. I contract. Yes, I contract about the, how their fans will look like in the future in terms of. So this is what we are expecting from you even better. So this is the engagement. Is it?

说话人 2 15:56

These are like some examples from museums or like professional of project output? There are so many materials on internet. So yeah, this is just like two of them. But like this is basically they output should be a way for you to explain your project in five minutes to the audience that will be there during the show. So it is important that it's like the product convey all the your research in one or mo multiple product. So, and for infographic or whatever, you ask everything. And then like just a reminder that the 5 minutes can be oral presentation or can be and empty.

说话人 2 16:54

4,5 break live, followed by a discussion with the assessment panel in front of the student's display. Yeah, they can be recorded. And then you have the handout. So these are three copies, single A4 page where you ex like they basically these are just a short description, kind of an option of your project with and name for the title, summary names, and so on and so forth.

说话人 2 17:26

And then again, the synopsis that will be showed on your table. And this is gonna be used by the audience that will be in the, that they show and they can read all the information about your project. So this basically is like the only view of Sylvia both. Any questions about this?

说话人 1 17:55

Just to remind you that you know all the information about this whole thing is available in your library. So read the unique brief after the briefing session, spend one hour reading it, right? Because that's quite a lot info. It's just like age, A5 pages, right?

说话人 1 18:14

The unit brief is 5 pages. It indicates what you need to submit. And then also along time that breathe the IRP realization before strengthening realization so that you will understand and make sure there will be your make the connection.

说话人 2 18:32

And yeah, so for us, Rob and I did proposal quite a long time ago. When we're submitting a group proposal, we adjust the proposal to suit. We don't have to resubmit. No, yeah, we got it correct.

说话人 1 18:48

And I think you have a slightly different version.

说话人 2 18:52

So basically, with you, please also with an eh, you have also did kind of slightly different schedule as well. So, and I think we already upload all the information on your model. So you can read all the information there. And if you have questions, please reach out to me and Usha.

说话人 1 19:17

And we, one thing just to double check, do you have the access to the full time model now?

说话人 2 19:25

Yeah, I don't know. Do you have it? Because, and alright, yes, because I wrote it on your my model stage, but you don't have access yet, Sophia. And yeah, working with Sophia so that we are trying to make sure that you also join this model so that we don't duplicate information.

说话人 1 19:56

And also you have, you gonna have the access the optional droppings. Yeah, by the origin army, by the full time.

说话人 2 20:03

Remind that your schedule is a bit different, also the deliverables are a bit different. So, but you can read everything on your model. There should be everything there already. No, I didn't go the time. Follow.

说话人 3 20:33

But there is no option to, you know, this is the fact information report that you might, I, for example, I have told you my report to check the clock, but I couldn't change it, right?

说话人 1 20:47

So when we set up the model, we let you will give we can give you attempts, free attempts maximum. So yeah, when you set it up, you get clear. So if you have higher turning, you go. Sometimes we just need to test it out. Sometimes if it doesn't allow you to do a degree, the tutor or the unique leader needs to manually change the setting. So in those circumstances, we can test that out. In those circumstances, we need to just stop me or change an email. So we could manually give you another. It's a valid question. Thank you for raising that.

说话人 1 21:26

Is there any question so far, guys? Just to remind you, we go through the schedule, you know what to expect, you know the teaching, learning activity that's going to happen.

说话人 1 21:38

All you need to do now is to read the unit brief place, right? Understand what is the IRP report template is looks, IRP Realization report is looks, right? What is the exhibition requirements are, and what's the critical reflection.

说话人 1 22:00

looks like. yeah, so it says assessment independent research project present day. And reflection, and then we have given you all the relevant details in the next couple of phases for you to understand what needs to be the alongside that you need to read the reports template. Yeah, because they are interconnected. Yeah. Any questions?

说话人 2 22:32

Alright, so this is the IFP report from. So really, so actually what we want to see is like, of course, I do know like that the communication is not this of everyone, but please don't just send the like the Google DOC. And as it is of that, what we want to see is that you create a little bit of communication issue. And we don't have, we know that all of you're not design, graphic designers, and that's fine, but just not like throw everything on a Google DOC and send it. Make sure that the communication is created a little bit. Alright, and this is a great example from Korea and she did a great job.

说话人 2 23:26

So this is the final higher active report and what we are expecting from you. So like on the TikTok June, we were asking till the preferable future and of course, when is the final deliverable? We expect all of the rest. And of course, you can change part of the chapters that you wrote for the after deliverable. But yeah, so we're expecting all of it. And as you can see, these are the chapters that from part 2. This is a chapter from fact 1 from RFP proposal. So this should be one unique PDF. Yeah, and then they can do one traffic. And I have a quote from last year from Jay. I'm gonna read it.

说话人 2 24:25

So she said, I'm thrilled to share that I get join AE Studio Class in London as an innovation and experience designer. I must say all the different versions of Ife we worked on and came in a very envy during the interview process, especially in the round with the partners and directors. We already appreciated how concise and well structured it was definitely annoying to write, but it paid off. Alright. so this is the synopsis we will. this should be really concise. Document and we will ask you the project name, short subtitles and type of keywords, cross statement by your contact information and optional Android code to more information. This is what like your audience will see your addition. They have in presentation what this already say. What the what we're expecting you to show is the purpose of future of your project ambition, the environment and the social challenge you are addressing. The key research insight, outcome, intent, audience edge, impact, design, filters, approach you have used, how you fit within the context of the centre. And this should be delivered in timing. So this should be quite fast to say, oh, if we get exactly and then they end out. So again, 3 copies, you will, we will ask you to write your the name called the title, project summary name, say thank you. So basically all these documents more or less repeat like the same thing, just that we need a different format. And then we have a public documentation. So then you will generate a visual and overwriting record for public distribution to your SEA2025. And basically then you like what we spend that time again. Okay, so basically if you want to appear in the sea website at the end of your master program, you can do sea, a picture and description of your project and amayo. So it's again the same kind of information that we're asking you during the kind of show. And then we are also working on the Hair Book, 2,025,2,026. This is a new thing. The idea of this see a book is to have like kind of a summary of all what happened during the year. And here again, we will ask you to picture of yourself, like newer images in your first slide and then and second slide, like a little bit of description of your project and a couple of more pictures. And this will be completed in Google DOC and we will tag your own page. So, or like we already preparing all of these stages, you will have like determinated section for you to add all the information. And then this is the Instagram page template that the exhibition committee made last year. We will also ask the exhibition for meetings, make the template for individual project and product this year. Do we like, do we have people from the committee here? Social media meeting, social media committee.

说话人 2 28:54

So the idea is to have like kind of a template for all of you so that we can show one by one all your projects in the Instagram page.

说话人 1 29:06

And I think as a good practice, it's always good to like, you know, record your journey and that the, I know the Instagram page if you wish so that you know, can publicize why you are, you know, working on your project output.

说话人 2 29:23

So you're right then to the layout will leave it for.

说话人 3 29:32

So at the student forum, we may remember about if you ask the teacher have some individual desks. And we sent out a survey to see if we wanted to sit with food, who wanted to be aware.

说话人 3 29:43

Samia worked really hard on a floor plan. I changed it a bunch. And then I know the studio. But essentially what it is, everybody has a desk. Some people are sharing, hopefully the people that you wanted to share with. If you get there and you don't like for your desk for free, worried, but really. Segment will stay as is for the rest of time, too. We also had that, which was a regional plan. That's where you said they're in teaching in the studio, just like there has been in the past.

说话人 1 30:30

But can we have fun attention?

说话人 3 30:31

We're gonna share the picture of the slides. Yeah, so there will be teaching just as there was before in the studio. So that means people in a small room will have to bring chairs into the big habits and everybody has to be ready for join group tutorial. Also, if the tutors need to sit around your desk at some time, let me question. So pretty much from turn to through relevant stuff, but when you get to your desk space, you might want to.

说话人 3 31:31

any questions。这个是谁？这不是他。

说话人 1 31:36

这我不认识。

说话人 3 31:37

我不认识。我看看。开始了。你门口的，你会过来做作业吗？我们可以过来一起做作业吗？不然我今天你知道我今天部门早上一直没起。

说话人 2 32:02

any question。

说话人 3 32:06

什么？

说话人 2 32:08

right。这。

说话人 2 32:09

are you ready play?

说话人 2 32:11

改了。没什么呀？

说话人 1 32:32

完蛋，记了。

说话人 2 32:39

跟情侣坐一桌，要记。
