

IRP 双语研究计划： 为什么好吃饭感觉不到什么

IRP Bilingual Research Plan: Why
Eating Well Feels Like Nothing

For Supervisor Discussion | 导师讨论用

May 2026

Research Question | 核心研究问题

Internal Attunement / 内在感知

How can environmental and contextual design help people read their own body signals more accurately?

怎么通过环境和情境设计，帮助人更准确地读懂自己身体的信号？

External Scaffold / 外部支架

...and provide non-judgmental external reference when those signals are unclear?

...同时在信号不清晰时，提供不评判的外部参照？

Target User | 目标用户

Broken Loop | 断裂的回路

The Core Problem (核心问题)

Broken trust in her own body's signals
对自身身体信号的信任断裂

The Behavior (行为表现)

She has outsourced food decisions to external rules and data
将判断外包给了规则、App和数字

Constraint Box (研究伦理限制)

Exclusion: Current clinical eating disorder diagnosis.
排除标准：当前有临床饮食障碍诊断的人群。

Theoretical Framework | 理论框架

Model: Fogg's Behaviour Model (Fogg行为模型)

$$B = M + \boxed{A} + \cancel{[P]}$$

(A) Ability / 能力 — Environmental Design (环境设计)

Reduce friction for healthy choices by changing the physical context.
Good choices become the default.

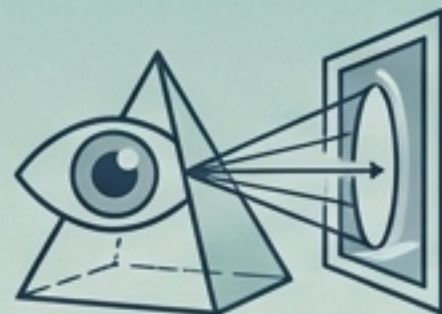

通过改变物理环境减少健康选择的阻力，让好的选择成为默认状态，不依赖意志力。

Secondary Research | 二手研究文献映射

Behaviour Design (行为设计)

Fogg (2009)
B=MAP, Nudge theory.

Speculative Design (投机设计)

Dunne & Raby
(2013).

Food Culture (饮食文化/心理)

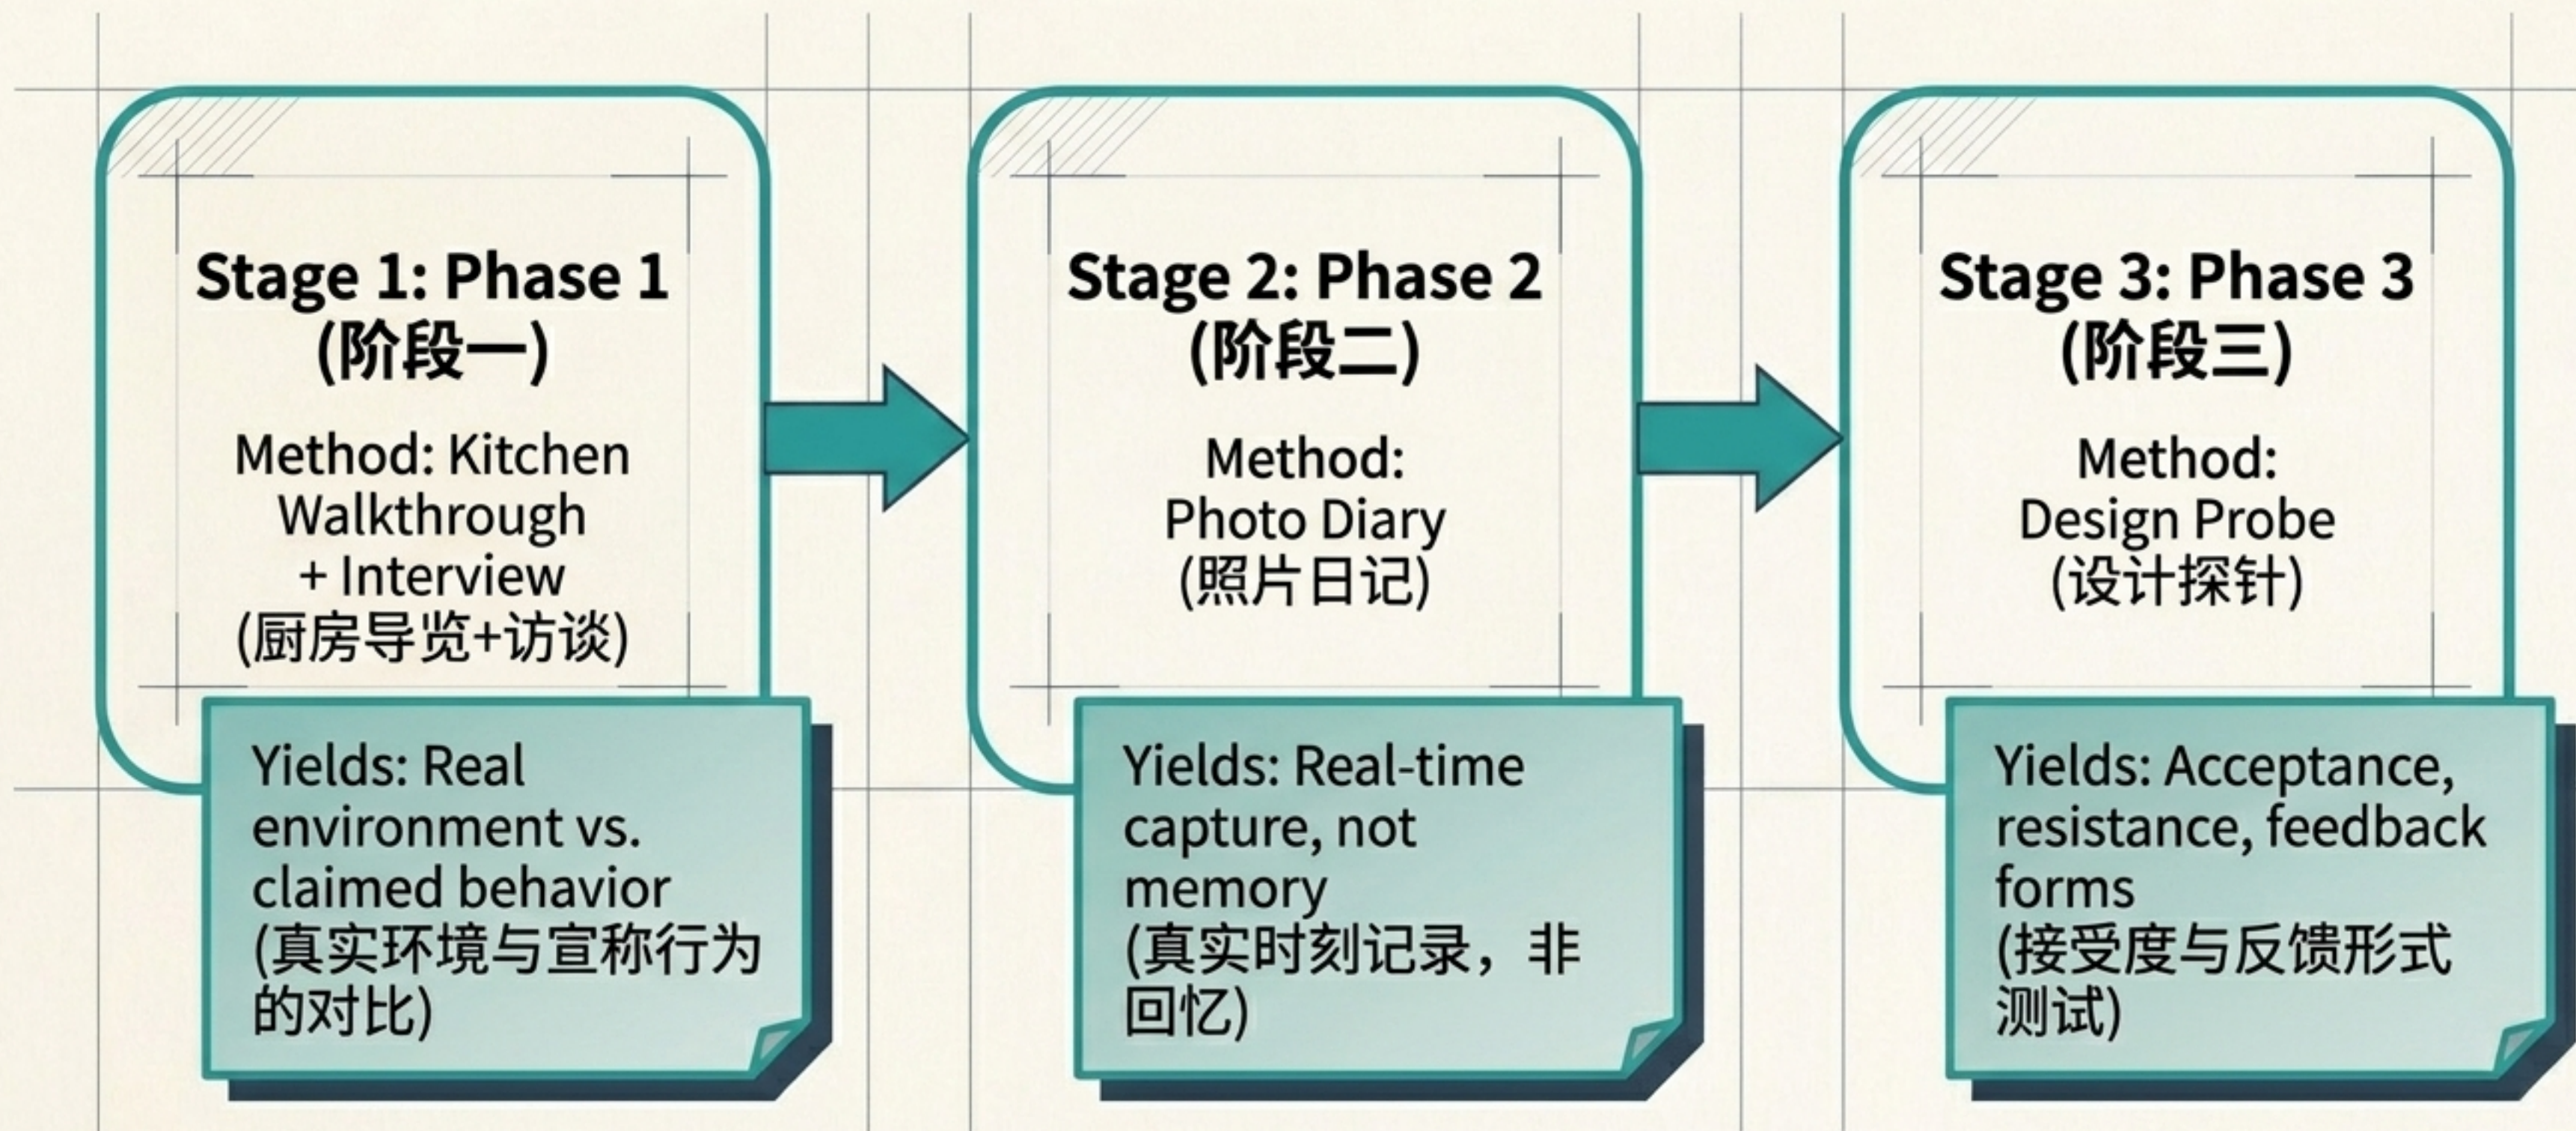

Intuitive Eating
(Tribole & Resch),
Cross-cultural
rituals (Rozin et al.).

Tech & Harm (追踪技术的反噬)

The Intention-Action
gap & data
reification
(Schembre, Wallace).

Primary Research Overview | 一手研究概览

Phase 1: Walkthrough & Interview | 厨房导览与访谈 (60-75 min)

What We See / 观察

Kitchen Walkthrough (前15分钟 - 厨房导览)

Look at real environments: what is actually hidden vs. visible.

观察真实环境：人们的描述往往与实际不同，什么被藏着，什么在显眼位置？

Key Q: "Open your fridge... what's the first thing you see?"

What We Hear / 聆听

Semi-Structured Interview (后45分钟 - 访谈)

Capture first-person failure moments and body signal vocabulary.

捕捉第一视角的失败时刻和描述身体信号的原话。

Phase 2: Photo Diary | 阶段二：照片日记

Duration: 3 Days (3天记录)

The Rule (核心规则):

Photograph the aftermath 60 seconds post-meal. Not the food.

饭后60秒拍摄“残局”（空盘、手、桌面），不拍食物。

Why? (为什么) :

Captures real eating moments, avoiding retrospective memory bias.

记录真实的进食时刻，避免事后美化记忆。

Phase 3: Design Probe | 阶段三：设计探针测试 (30-45 min)

Context: Opening by looking at the participant's own Phase 2 diary photos.

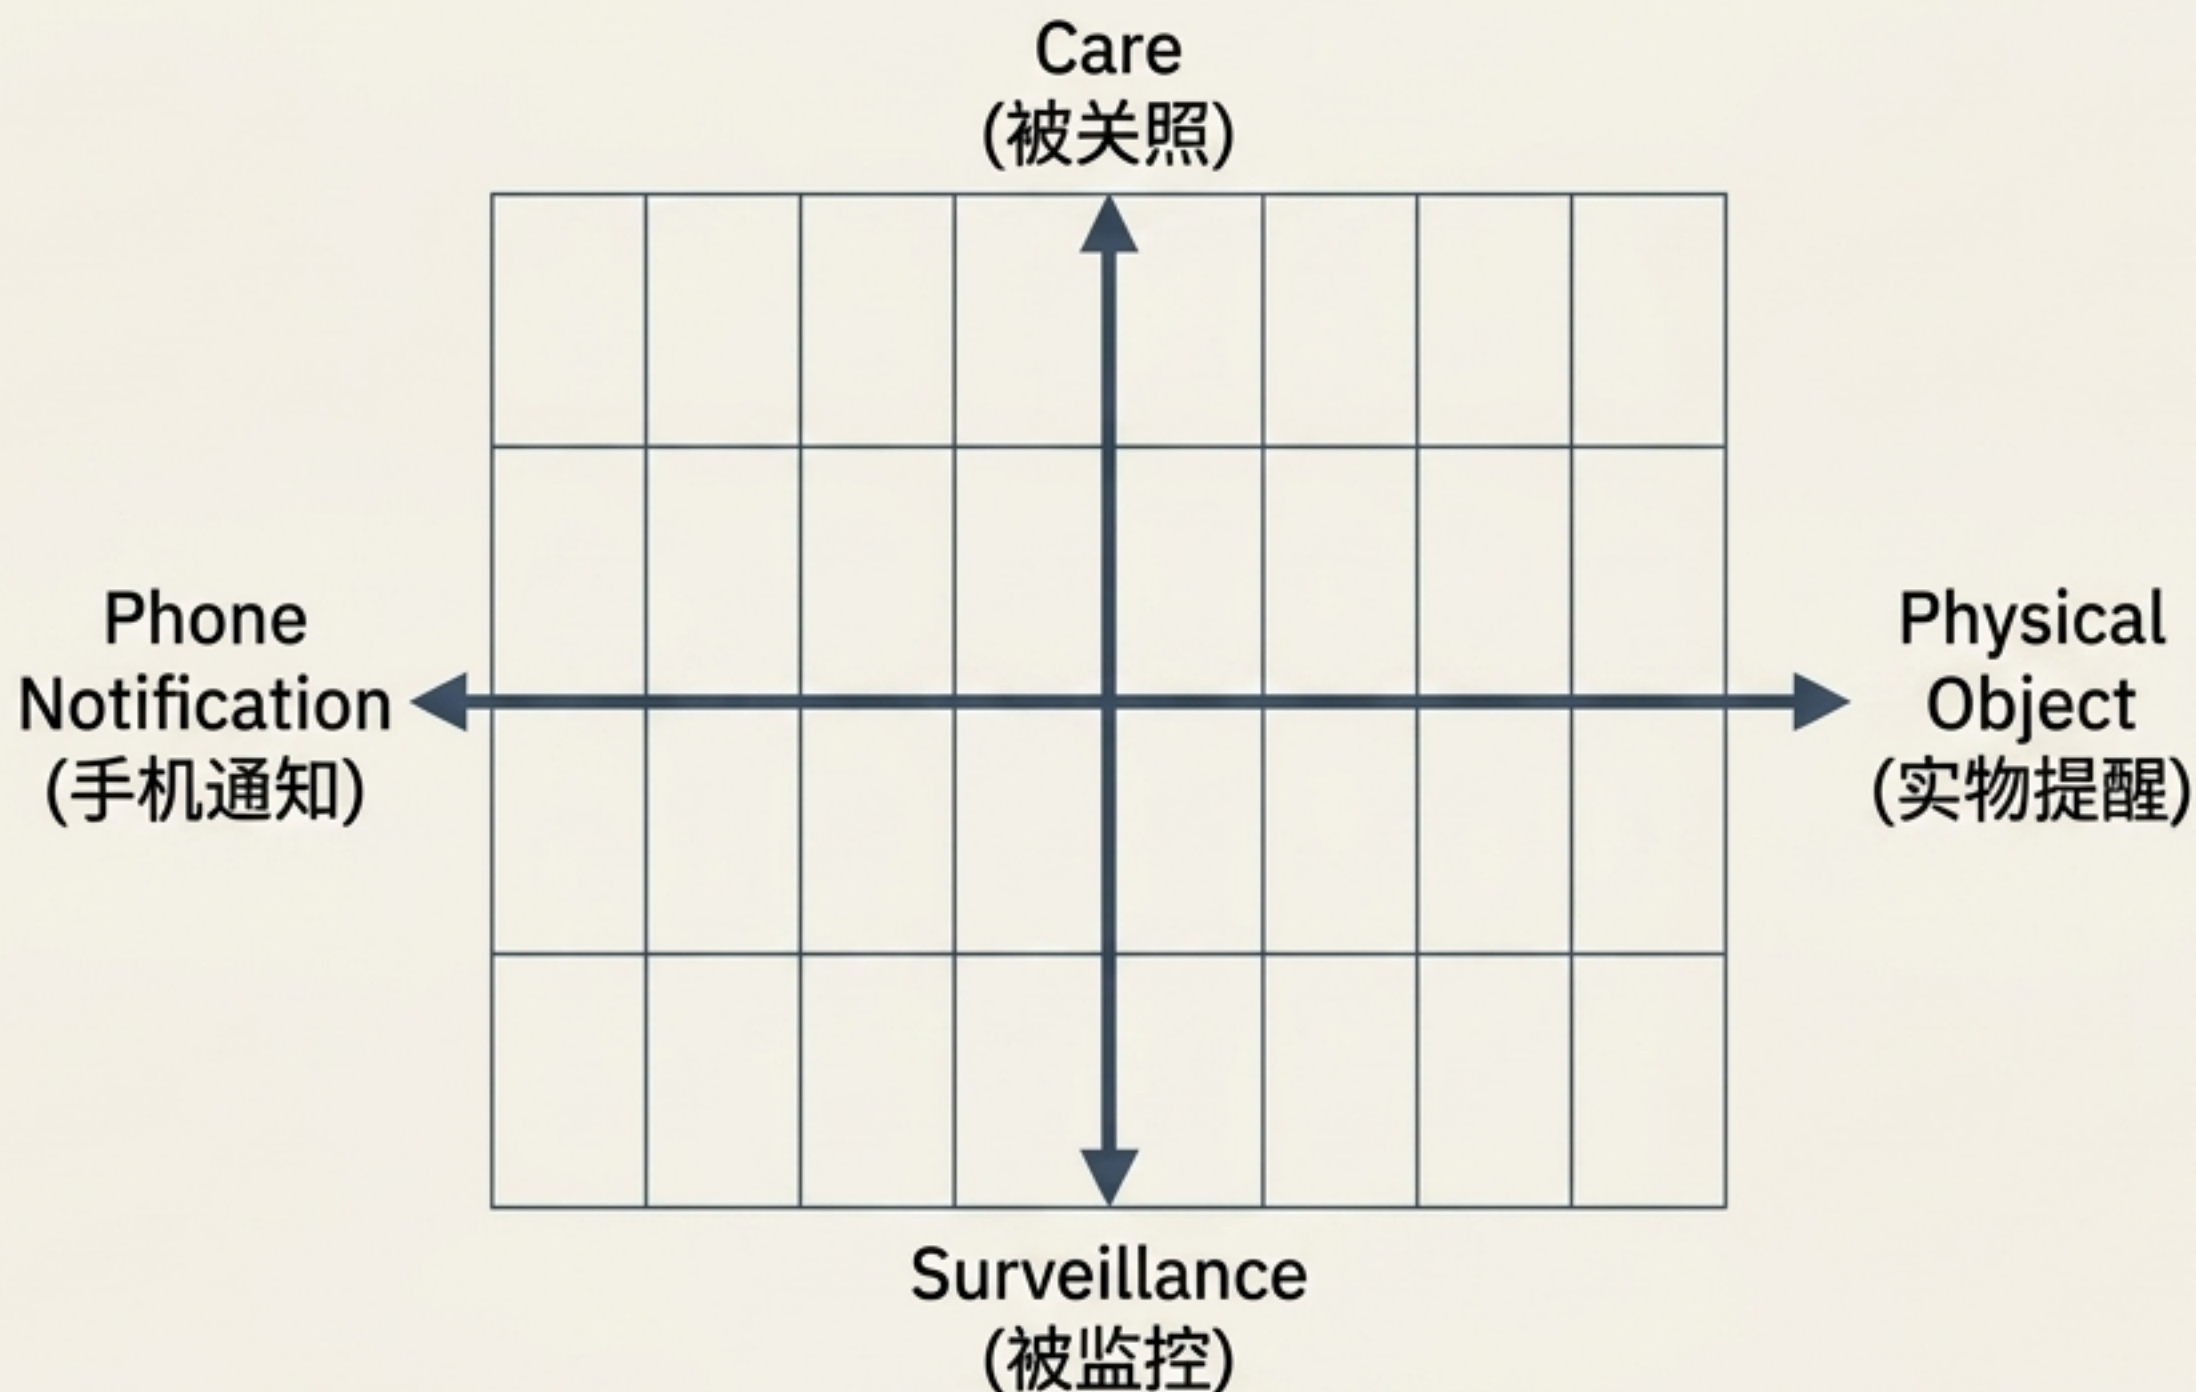

Evaluation Goal: Testing 2 concept forms to measure feeling useful vs. intrusive (有用还是打扰).

The Prompt (核心提问):

“What does your body feel like at this moment?”

No score. No judgement.

“你现在的身体是什么状态?”
没有打分，没有评判。

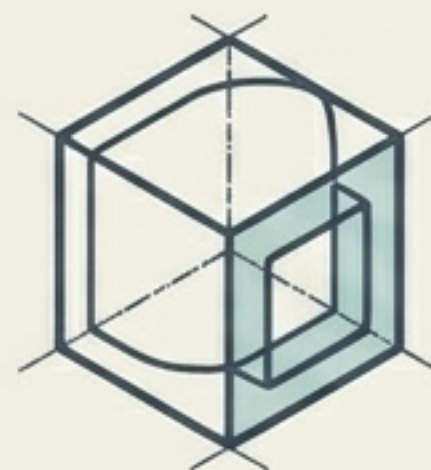

Expected Outputs | 预期产出

Output 1: Design Principles (设计原则文档)

A non-judgmental framework for environmental dietary feedback.

针对环境与饮食反馈的非评判性设计准则。

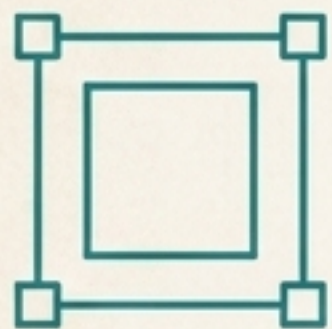

Output 2: Concept Sketches (概念草图)

Speculative provocations translating principles into form.

将原则转化为具体形态的投机设计草图。

Questions for Supervisor | 给导师的问题

Q1: Scope (范围) :

Is A+M from Fogg's model, without addressing 'Trigger', appropriate for an IRP?
(只做A和M合适吗?)

Q2: Ethics (伦理) :

What ethical considerations apply specifically to the kitchen walkthrough? (厨房导览在伦理审批需要注意什么?)

Q3: Recruitment (招募) :

RCA network or external?
Recommended channels?
(RCA内部还是外部? 有推荐渠道吗?)

Q4: Output (产出) :

Does the format (Principles + Sketches) meet GID IRP expectations? (这符合GID IRP的期待吗?)
