说话人 1 00:00
Specific.

说话人 2 00:01
So you can, so if you think about smartphones, they change everything, right? So how technology can change the culture. So if you like 15 years ago, we were booking cars through our app. There were nothing like that. So like that change completely the way we're and being right. So get the same tier, right? Samsung gun, more technical. Of course, they are not always changing the culture, but maybe it doesn't change the culture of everyone, but it changed the culture of like specific people who work on that field, right?

说话人 3 00:44
Not specifically our target center within our, but maybe from people there's right.

说话人 2 00:50
So people are not stakeholders who are affected by these technologies and how they are changing their ways of working, for instance.

说话人 3 01:00
Okay, so, and I would say that I can probably check out this, for instance.

说话人 2 01:46
So do you understand what is for different teams? It's pretty printing thing is very solid examples.

说话人 3 01:59

Yeah, flower. So how that would affect the training is supported. Okay. Yeah, nothing is not that bad. Favor, but I don't know like if this part connected with governance and power.

说话人 2 02:40

Okay, I mean, this is more effective on its material, basically. No, but here you need to think about where we culture now.

说话人 3 02:51

Culture open source, like repair business now.

说话人 2 02:59

That's right. And now there is no likely to communicate over the records, right? If you think what is the ad group and for your research.

说话人 2 03:18

Okay, so how does the motivation?

说话人 3 03:25

So for instance, and if you're publishing a specific condition, account network condition, okay, like all this country, think about my understanding, bring up your ashes. So yes, no, that's not correct.

说话人 2 04:18

And their differentiation. So you do not do that. You need always do we have to do, I can tell you, because otherwise, when you are trying to understand the legislation countries, the administration right now, think about the house technology.

说话人 3 05:08

Why, how this, yeah, for product design also like this is one the same. And then the thing like how the labor.

说话人 2 05:44

Yeah, but now you pick this technology when I like how this is correlated with your research. And I understand. Nice. I told you the engineering.

说话人 2 06:09

Why you now? Yes, no, yeah, take a picture. Now, when I. What is your technology? What is your topic?

说话人 3 06:28

Okay, children perhaps. So the schedules are okay, make sense.

说话人 2 06:55

What do you think? Culture?

说话人 3 07:11

So you need more minute or maybe. Thank you guys. We need to discuss.

说话人 2 07:30

And trying to open each other, trying to explain why for the printing is this problem you are changing.

说话人 3 07:40

Okay, so, okay, if so I've already finish.

说话人 1 07:46

Let's move to they didn't, I think some need more time.

说话人 2 07:51

Okay, so I give them 5 content. Yeah, German and Samana.

说话人 3 09:00

Come on. No.

说话人 1 09:34

So now it's crucial to me since we need 2,4 hours. So let's discuss very quickly.

说话人 3 09:42

Two minutes to discuss with your colleague and that your colleague forward members, correct?

说话人 1 11:49

But time is entire, so we will need to forward. Cuz I mean, we're not getting late. Yeah, otherwise we're not getting the four hours. So for the next one, let's try to answer about how they change effect in our operational way, like in the culture ways, like the mindset, how they do actual, yes, right? They should actual like, yeah, counter aspect that can be influenced by technology. But now we're going to practices like, oh, every day practices are changing, like workflow, recruitings, operational, being like actions, like doing things, like how we do things.

说话人 2 12:41

This can be on the industry side, but also on everyday live, right? A experience. Yes. Are you showing me over here? if you ask question and you do not answer。 so what is your technology。 not change。

说话人 3 13:16

what is your technology?

说话人 2 13:57

那 what is changing in the industrywhat is like how that will influence the industry。

说话人 2 14:07

Do you think that industry will be active for this。 Maybe not because they like the internal software so they try in internal software right。 So we need to know it' s more interesting to understand what is like the problem for。 right。 not just from a user perspective, but also from a brand。

说话人 3 15:26

the outer space of it train。 Objective memory in our earth is special in our diversity situation because people can drink them to Indian English, but we understand the outer space, it has access. Okay, so access to enter the other space. So our collection manually is not like a diversity as in the earth centralization. So how can we, yeah, yeah, I choose AI.

说话人 1 16:34

So many of you finish the supporter now?

说话人 3 16:42

Okay, what do you guys? Okay, I think it' s good if people want to. It seems.

说话人 3 17:30

Today on space together.

说话人 2 17:41

This is more.

说话人 1 17:55

Okay, so we are going forward with the discussion question. Two minutes to discuss with your colleague about the about this topic. And then we are going forward to the economical part of the last part.

说话人 2 18:11

What do you have?

说话人 4 18:11

Technology, AI agents.

说话人 2 18:14

Okay, how we will influence the economy. The practice side, you didn't write it. The culture.

说话人 4 18:25

My topic is can the good eating be design into the environment and feedback, not willpower speaking, can eating, yes. So the AI agent will make influence like instruct institutional instructor when air agent give like advice. So who is like respond for that? But like what data, what to which company or like government will to responsible for X data like a security like culture. I just think about like a trust AI judgment, like that is their own body.

说话人 2 19:16

Okay, but think about also restaurants and other things like AI agents is more related to like how AI is doing things for you without you saying anything. So how this will ask you to eat better, for instance, maybe they can, the AI agents can douche and groceries for you, right? Yeah, it's about eating better and more environmental, like more sustainable, right?

说话人 4 19:53

Actually, I don't want a lot of people wanna just like eating more healthy, but they didn't have like a feedback to you're in a right way so you can keep to like eat like healthy food.

说话人 2 20:09

Yes, but you know, in this workshop, you need to understand how this technology will influence the future of your top base. Yeah, right. So like you need to list different ways how AI technology will influence your topic. Move forward to the lecture.

说话人 1 20:29

Yeah, just five minutes and you can finish this session. So I will give you less time for this part. So let's think about how this, yeah, this technology will value creation business models or economic relationship in the new system you would imagine in the future and are they are affected by this technology. So I will give you three minutes for this part. I'm sorry. So you will have to discuss in the last 3 minutes off of the other. Thank you.

说话人 2 21:29

By Queen.

说话人 3 21:36

And wait, this is a video in this exercise. We should be more. So you have genuine now.

说话人 4 22:53

Oh, with her.

说话人 2 23:30

So yeah, yeah, I change it.

说话人 1 24:02

Okay, next time let's wrap it up and discuss with your colleague about his last five and yeah, last 2 minutes.

说话人 2 24:16

So before the discussion, this was for you, not an exercise, but not like to understand how you can use different kind of methodologies to better improve your and in mission future. I often understand the negative trends and trend. Alright. So this is more about the process than really the exercise and the result of this, my girl.

说话人 2 26:00

Alright, guys, I think now here you will end up the we received.

说话人 3 26:19

Yeah, but yes.

说话人 2 26:38

All right, guys, now in this room, please, user journey map and casual books diagram in the other room to do a journey that is computer personas with a little shot.

说话人 1 26:55

Thank you, Emma.

说话人 2 27:03

Alright, I'll start 10 part. Take a quick. Don't afraid. Please say.

说话人 3 28:58

不知道。
